WASCO COUNTY PLANNING COMMISSION AGENDA PACKET

FOR

Hearing Date: September 26, 2016

Hearing Time: 3:00 pm
Hearing Location: Columbia Gorge Discovery Center, Theater/Auditorium
5000 Discovery Drive
The Dalles, Oregon 97058

Action Item(s):

QUASI JUDICIAL HEARING:

PLASAR-15-01-0004

Request by Union Pacific Railroad and their land use consultants, CH2M Hill, to expand an existing railroad siding on either side of Mosier, Oregon for 4.02 miles of new second mainline track and realigned existing track; place five new equipment shelters; install drainage structures, a retaining wall, new lighting and signage, and wireless communication poles; modify existing utilities, temporary landing zones for construction; construct temporary and permanent access roads; and a property line adjustment. The request also includes off-site wetland mitigation east of the primary project site.

Comments received prior to September 6 hearing

VOLUME #2

No More Oil Trains Through the Columbia Gorge!

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Nieba Paige

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Galen Trembath

Train Traffic Through Mosier Oregon

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely

Curt Sayers

Railroad application

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Charles Huber

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jerome Roth

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Katherine B Cote

Portland, OR 97266

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

John R. Bartels

Union Railroad's new rail track near Mosier, Oregon

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Helen Jones

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Susanna Askins

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Will foster

Poisons and oil don't belong anywhere. Stop the Union Pacific new track near Mosier, OR.

Columbia, MD 21045

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sunil Misra

No increase in rail traffic through the Columbia Gorge

Dear Angie Brewer,

Mosier, OR: The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Michael Iltis

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the

Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Judy Savard

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil

tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that

any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated

key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Lisa Simms

Request: Stop oil trains in Columbia Gorge

September 3, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Catherine Caron

323 E Augusta AV

Spokane, WA 99207

September 3, 2016

Dear Angie Brewer,

I urge you to deny Union Pacific Railroad's application to construct a new rail track near Mosier, OR.

I live in Spokane Washington where BNSF, despite public outcry, was granted rights to build a refueling station over our regions aguifer. The refueling station leaked within months of being built, just as the public had predicted.

Different issue you say. No. The issue is that oil trains explode, refueling stations leak, oil is toxic to our planet and we must finally end our dependence on oil and seriously invest in alternate forms of energy.

Kootenai County Idaho received a brand new firetruck in return for the commissioners approval of the project. What are you receiving?

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Catherine Caron

September 3, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Lynda Barondes

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

McKenna Eckerline

Union Pacific railroad application for new rail tracks in the Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

David LaVerne

Oregon Sierra Club Comment on UP Rail Expansion Permit PLASAR-15-01-004

Hello and thank you for contacting me.

I will be unavailable today, checking email occassionally. If you need immediate assistance, please call 541-506-2560 to speak with the planner on duty.

Thank you and have a wonderful day,
Angie

Rail tracks not maintained - stop trains carrying oil from traveling on them

1 message(s)

Date: Sat Sep 03 2016 01:15:54 GMT-0600 (MDT)
From: Rebecca Bierbaum

Rebecca Bierbaum

3719 Horn Ave.

Alton, IL 62002

September 3, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Rebecca Bierbaum

September 3, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely

Janice Rose

Oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Tom Fitzpatrick

September 2, 2016

Dear Angie Brewer,

My family has known personal loss because of a railroad accident in the Gorge. My grandmother's brother was killed at the age of 28 in January 1906 in an accident on the Great Northern Railroad line a short distance east of Rock Island. As this was before I was born, I never had a chance to get to know him.

But this would pale in comparison to a accident with an oil train now, when trains are so much longer, are filled with toxic and combustible fuel, and run through areas with much greater populations.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier

Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would

adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely

affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Thomas W. Tilque

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause

adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That

information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

To whom it may concern. We should NOT allow a proposed rail expansion that wojuld allow double tracks to be constructed in Mosier in order to send more and longer trains at higher speeds through Mosier. After what has happened in Mosier with the derailment, everone knows that any expansion could lead to an even larger disaster. Say NO to the expansion.\\

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Robert Haslag

Redmond, WA 98052

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Suzanne Geraci

Consider the Union Pacific track record for safety

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Daniel Giesy

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Laura Newton

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Chip Henneman

Negative Enviromental Impact of Oil Trains On the Columbia River

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

W. Clark

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment.

The railroad is relentless -- to be so brash as to expand tracks through Mosier after the recent derailment. We need less train traffic, not more.

As one of many hikers in the Gorge, we believe its natural beauty should be protected.

The residents of the towns in the Gorge also need to be protected -- both on the Oregon side and the Washington side of the Columbia River.

Please deny Union Pacific's request to expand rail line capacity.

Sincerely,

Jean M. Avery

Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier

Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Robin Patten

Stand Up to Oil

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia

River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia

River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Wayne Andrews

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

JOSEPH LITE

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean

Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Suzanne Wooldridge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific fault for

the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans

to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Timothy J. McLaughlin

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal

trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown

pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Kristen

No more oil trains through the Columbia Gorge.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Florence, OR 97439

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Patricia Wilson

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Elizabeth Bush

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Lacey Levitt

Columbia Gorge oil trains

Menlo Park, CA 94025

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I share the concerns of the Stand Up To Oil organization. I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

R C Litzsinger

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

M Port

Oil Trains

Fircrest, WA 98466

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Joan Cole

No more oil trains in the CR Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Toni Romei

No New Rail Track

Lynnwood, WA 98037

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Laurel Hughes

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

It is high time to move away from oil and coal. adding more fuel to our fast increasing cimate change makes no sense.

Alice B. Evans

Oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge. All these plans are a giant backwards step in the quest to prevent global warming and stop the ever worsening contamination of our one and only home...planet Earth!

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Barbara A Sim

No oil train thru Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the Federal Clean

Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Thomas Wolslegel

Please do not allow the proposed new rail tracks near Moiser. I was arrested in Vancouver WA sitting on the rail raod tracks to stop the oil trains. My great grandclidren deserve a future!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would

adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely

affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Troy Horton

No new oil trains near Mosier, Oregon

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause

adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That

information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge.and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Tess Morgan

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Rebecca Chang

Oil trains

Burlington, WA 98233-9670

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Erik LaRue

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Bonnie Pattishall

No to Union Pacific

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Michael Sileno

No More Oil Trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Polly Tarpley

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Susan Harman, Ed.D.

Oil Trains--No!

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Andi

Angie

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Edward Jasiewicz

Oil Trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

John Bremer

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Joe Schott

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Eric Hensgen

Eric Hensgen

Deadly oil train traffic in the Columbia Gorge along the Columbia River must be stopped. The potential for disaster due to derailment is devastating.

Beaverton, OR 97007

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

G Joan Jarvis

No New Tracks near Mosier, OR

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal

trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown

pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

THE POTENTIAL DANGER TO CITIZENS AND THE ENVIRONMENT ARE NOT WORTH THE RISK, JUST FOR GREEDY BILLIONAIRES AND OIL COMPANIES TO ADD TO THEIR RICHES!

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jeff Tatom

No more oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely

James Ploger

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Don Wiltsie

No new tracks on the Columbia, please.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Patty Haley

No Oil Trains In The Columbia Gorge

Portland, OR 97212-1078

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Steven M. Cooper

Oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Shelby L. Hood

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Marion Corbin

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am opposed to Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

John Ardner

Add another heartfelt plea to kill the oil bomb trains!!!

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sharon Douglass

No UP double track!

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Robert Blumenthal

Oil Trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Clayton Burford

Columbia River Coal and Oil Trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jarrett Cloud

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This

demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through

some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to

cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be

adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Paul McCullough

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This

demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Heather Marie

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

PC 2-2-1241

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Union Pacific Track Expansion Application

1 message(s)

Date: Tue Sep 06 2016 21:09:15 GMT-0600 (MDT)
From: Hugh McMahan
To: angieb@co.wasco.or.us
CC:
ID: 157029efa313106a

To: Angie Brewer, Planning Director, Wasco County; the Wasco County Planning Commission

From: Hugh and Linda McMahan
3953 Herriot Drive
Mount Hood, Oregon 97041

Dear Planning Commmissioners:

Although we are not residents of Wasco County, we do reside in neighboring Hood River County. Were Wasco County to approve the Union Pacific track expansion project, there could obviously be deleterious impacts far beyond Mosier running up and down the Columbia River Gorge, both acutely and chronically. Just as it did for the town of Mosier, the derailment and fire last June got our attention! Never was "It's not if, but when" more apt!

To save time, yours and ours, we will not reiterate the detailed testimony you will undoubtedly receive from Friends of the Columbia Gorge and many others. We have reviewed 21 bullet points provided by the Hood River Valley Residents Committee and the Friends of the Columbia Gorge (we are members of both organizations) regarding the threat of crude oil trains, impacts to the Gorge, impacts of potentially dramatically increased rail traffic and the points regarding the need for further review.

We therefore emphatically request that the Wasco County Planning Commission **DENY** this track expansion project. Aside from the direct and indirect impacts and the potential impacts, the era of profit driven corporations riding rough-shod over individuals, communities, habitats and regions must end if we all are to survive. Saying "NO" to this project is a necessary step.

Thank you for the opportunity to express our concerns.

No more oil trains in the Columbia River Gorge!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby

increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union

Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Josie peper

railroad sidings

Hi Angie, and all involved,

My name's Tim Norgren and I lived in The Dalles for several years. Two years ago my wife and I moved to Stevenson to be closer to the majority of my work (through Laborers local 737), but I maintain ties to the community as well as friends in Mosier and Hood River. I regret my twelve hour work day has kept me from being able to attend the hearing on short notice, but I thought I'd at least drop you a note.

I deeply hope you've denied UP's proposal outright!

I watched what happened in Mosier and the way they traumatized residents and polluted their home, then manipulated them to toe their line simply so they could get the cleanup done with some hope that it would be adequate and without it being drug out for years, while immediately pushing to resume their volatile hauls of explosives and toxins through the National Scenic Area we happen to call home.. and that without even having outside investigation (they immediately "cleaned up" the evidence) into what happened or how to prevent it from happening again. IT WAS DISGUSTING!!! And now they come to you, to our community, to Mosier, and ask for more.

Companies can and do say a lot about safety.. they make promises s to what will happen on projects, as well as what will be stored at those sidings. But can they guarantee they're not storing more dangerous or explosive freight right next to other tracks where derailments and explosions are likely to happen again? Can we enforce it if so? Does their track record show them to be trustworthy? Will they pay for the damage that comes with such wildfires and spills? Can they remove cancers or bring the dead back to life? And if it interferes with profits would they bother if they could?

I work in construction and have seen the realities behind lofty safety and spill prevention promises. On one job I worked for a William's pipeline I saw two hydraulic spills just covered up and also watched as likely hundreds of gallons of diesel escaped from a fuel truck into an "organic" farmer's field because of a stuck valve. We did everything we did to stop and contain it, but in the end there was no inspector close by so it was simply bulldozed over and left unreported. I regret my part in that to this day but it happens all the time with big companies. Please Don't trust it, and deny the permits! I hope I'm not to late for this note to matter. Thanks for reading it.

Sincerely, Tim Norgren 740-817-3101

No more oil trains through the Columbia Gorge.

Angie Brewer
Wasco Planning Director

Dear Ms. Brewer,

I am encouraging you to deem Union Pacific's request to be **reviewed as a new development**; considering the size and potential impact on the community of Mosier and the surrounding environment. Regardless of whether it is an individual or entity that owns property the public interest for health and safety should not be subservient to land ownership! As an individual property owner I am required by many city ordinances to not harm, abuse or otherwise take advantage of my neighbors/community or develop my property for financial gain outside the scope of the city statutes. Consequently, Union Pacific as a property owner should be held to the same standards of public safety and health that I am required to follow as a property owner.

Again I strongly urge you to deny Union Pacific's request for an expansion as it really is a new project and **most importantly,** it violates the responsibility that all property owners have to the local communities as regulated by statutes governing property ownership regarding public health, safety and protection of the environment.

Sincerely,

Ms. Robbie Moller

Oppose expansion of Union Pacific train tracks at Mosier

SUPPORTING RATIONALE

1. Union Pacific's notoriously large number of serious safety violations in the past and continuing into the present and its seeming immunity to improvement.

2. The record of industry oil by rail disasters, unsafe cars, etc.

3. An understated daily increases in rail traffic (by UP) the track expansion will facilitate with the following consequences:

_ Additional safety threat the expansion poses for the Columbia River and communities along river routing in the transportation of a deadly cargo from source to destination.

_The multiple quality of life impact more oil train passage will have to cities, towns and communities along the Gorge: the delay, pollution and noise.

_ the transformation of a unique world class attraction the River and the Gorge, to an oil shute for the fracking industry.

_ An infraction of public and Native Tribal land.

_The Mosier derailment, which though fortunately could have been worse, it's consequences are yet not fully talleyed.

Is this not enough to deny permitting ? Are tthousands of voices against this proposal not heard ?

The decision made with regard to this proposal will determine whether corporate profit or peoples safety and welfare, Native American rights and the environment matter more. Which is it UP, profit or people and the environment ?

Hello, my name is Brian Barrett, and I am a registered nurse. I live at 204 Center Street, which is about 500' from where the train wreck and oil fire occurred.

The Union Pacific Railroad was created in 1862 by President Abraham Lincoln as a crucial part of the successful Civil War effort. It has survived several illegal scandals (particularly bribery of elected officials), bankruptcy, and mergers to become one of the world's largest and most successful transportation companies. Today, Warren Buffet's UP collaborates with the oil and coal industries to achieve a very high profit margin. According to Fortune magazine, 2014 profits were $5.18 billion, which equaled the return on revenues ratio of Apple at 21.6%. But that is not without significant risk and cost to UP and the general public. Part of these huge profits come from dubious petroleum mining techniques, such as fracking. Due to its enormous economy of scale, another part of these huge profits comes from the tweaking of various aspects of the railroad machines, procedures, and policies. For example, did you know every 1mph increase in speed eliminates the need for 200 locomotives? Fortune magazine told me so. There is great incentive for small changes in this railroad company.

The train wreck and oil fire scorched several acres, partially destroyed the water treatment plant, polluted the surrounding ground, and continues to necessitate the destruction of a wonderful small forest habitat adjacent to the tracks.

My understanding is that soon, Mosier will lose access to what I consider to be its most valuable resource. Beach access will be closed for a very long time, perhaps over 18 months. Additionally, there will soon be a second track built through Mosier in order to accommodate double the rail traffic. So Mosier will also lose significant quality of life, as automobile traffic is controlled and all trains sound their horns at all hours of the day and night.

I almost forgot to mention the approximate doubling of risk of crashes due to the doubling of railroad traffic.

Mosier was very lucky in a bad situation. I commend all who got close to the fire in order to subdue the flames and prevent it from growing. That was heroic. I also commend UP for an apparently speedy cleanup. It looks good too. Everybody was lucky. Let's pretend we weren't so lucky. The town of Mosier could have been destroyed, literally blown up and burned. Would there be a desperate rally and hearing like this one in order to stop further increases in high-risk rail traffic through little towns? No. Because I believe there would be little question what the right thing to do would be. And that is to disallow a second track through Mosier and other similar communities along the railroad.

Now let us closely regard the Wasco County commissioners as they deliberate to do the right thing

without any undue influence from the railroad. Everybody should be watching closely.

Thank you for your attention.

Brian Barrett, Mosier

ID: 157017d8b3daf0de

Dear Ms. Brewer,

As a public health nurse who spent over 25 years conducting injury prevention research, I am concerned about several health and safety issues with the proposed expansion of the Union Pacific Railroad in the Mosier area. In my field, we did not use the term accident which implies an event of chance. Instead we focused on analyzing the factors that contributed to injuries and found that injury events were understandable, predictable and preventable.
The rail expansion will allow for a large increase in the number and speed of heavy oil trains travelling through the Columbia Gorge along rails lines whose parent company has a poor safety record. Oil trains have higher rates of derailments than other types of freight trains and the Bakken oil being transported is very volatile and has been associated with a number of devastating fires and explosions. Thus, we can predict that there will be an increase in derailments, fires and explosions and collisions that will seriously impact people's lives and public safety.
As a public health nurse, I am also concerned about a number of other issues associated with this increase in oil and coal rail transport. Several of these are outlined below.
Air pollution will be increased because trains' diesel engines emit particulate matter. Diesel particulate matter is associated with impaired pulmonary development in adolescents; increased cardiopulmonary mortality; pulmonary inflammation; increased severity and frequency of asthma attacks, ER visits and hospital admissions in children; increased rates of myocardial infarction in adults; and, increased risk of ischemic stroke.
The increased number of trains will also increase noise which has been found to be harmful to human health. Noise exposure causes cardiovascular disease, including increased blood pressure and arrhythmia; stroke and ischemic heart disease; cognitive impairment in children; sleep disturbance and increased rate of injury events; and, exacerbation of mental health disorders.
With an increase in coal trains, there will be an increase in the amount of coal dust along the tracks and in the river. Trains carrying coal can lose up to 500 lbs of coal dust per car per 500 miles (100 cars = 25 tons). Coal dust is associated with chronic bronchitis; emphysema; pulmonary fibrosis (pneumoconiosis); and, environmental contamination of soil and water through the leaching of toxic heavy metals such as mercury, arsenic and lead.
Because of all the health and safety risks associated with the Union Pacific rail expansion and the associated increase in the number and speed of oil and coal trains, I urge the County to deny the application.
Sincerely,

Diane Winn RN, MPH
Portland, OR

As a resident in Hood River I have concerns about the recent proposals by Union Pacific to increase tracks and rail traffic through this environmentally sensitive area. The recent oil train crash this June only high lights the real dangers we face from the transportation of these highly flammable materials through the Columbia River Scenic Area.

Please do what you can to limit the rail traffic of oil in our wonderful gorge.

John

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new

track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Naomi Cohen

Mosier Rail Expansion Hearing

I am generally opposed to the environmental impact of more rail traffic though the Gorge Scenic Area. Important concerns about railroads safety must be addressed.
Per the Tri City Herald, September 2nd, page 10A, Washington state Department of Ecology has adopted a rule that railroads shipping oil through the state demonstrate that they can respond immediately to any spills. This will make rules for railroads the same as those for companies that move oil by vessels or pipe lines. Railroads should meet these standards on both sides of the Columbia before any expansion can be considered.
In addition, railroad inspection data secrecy is currently a concern in Spokane per the Tri City Herald of September 6th, page 5A. Federal law allows local governments to request this data and the safety of rail infrastructure can not be objectively decided by the railroads alone. This information must be presented to Mosier and the state of Oregon as detailed engineering reports before any consideration of rail expansion.
Thank you for the opportunity to present my concerns

Dear Ms. Brewer,

I am submitting the attached comments regarding the Union Pacific proposal to construct a second rail line through Mosier, in our part of Wasco County. The reference number for this proposal is PLASAR-15-01-0004.

I have read the extensive comments prepared by your staff, along with the conditions recommended if the county were to approve the application. Your staff comments, along with the actual Union Pacific application and many other analyses of the proposal have given me a great deal of information about the requested second line and its expected impacts.

Thanks for all the work your team has done on this matter.

Sincerely,

Will White

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sherman Hoover

September 1, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Faith Strailey

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Pamela Bacon

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Angie Brewer, Planning Director
541-506-2560 or angieb@co.wasco.or.us
Wasco County Planning Commission

Dear Ms. Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge. I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

•••••••• The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to

fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

•••••••• The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

•••••••• The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

•••••••• The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

•••••••• Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

•••••••• The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

•••••••• Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

•••••••• Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

•••••••• Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

•••••••• Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

•••••••• A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

•••••••• The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

•••••••• The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

•••••••• The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

•••••••• Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

•••••••• UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

•••••••• The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

•••••••• Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jane Yater

Union Pacific Railroad' new rail tracks in the Columbia Gorge

Pittsburgh, PA 15217

September 1, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Amy Roberts

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jaci Guerena

Please protect the Columia Gorge

September 1, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.
