- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause dverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated ey viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County dinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia ver. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is hibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of nts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any overed commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown tion into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia . As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the mbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Act.

s of more trains:

recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of uch this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Barbara Darnell

No permit to Union Pacific Railroad to build more track

August 30, 2016

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ins, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

de oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River ge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby asing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for itional use review require a determination that the proposed use will not burden fire facilities and available ces, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of osier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unio Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could incre train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosie Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is ndeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

inally, the project area has a very high probability of containing Native American cultural resource sites that could be dversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

ank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Rive Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligh the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault fo the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any ncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia iver. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the olumbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean ater Act.

pacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of v much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union cific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase n traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier an Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nveniences drivers, hampers first responders, and violates the conditional use review criteria.

review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the unity and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

mpacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through ome of the most highly protected lands in the National Scenic Area. The project could increase the number of trains assing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would dversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is egraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. Th inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloos State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adverse affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure th any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes pl to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sa of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings tha

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Ryan Wilkerson

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbi River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ffect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that ny sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that e land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That ormation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a fessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

lly, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

k you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely

Steve Robey

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ins, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available ices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new rack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, he Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture eshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available ices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for l train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This nstrates the pattern of inadequate maintenance done by Union Pacific.

s to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. T inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansior

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

incerely,

ncerely,

ary Emberton

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light o the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trai passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

mpacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of ow much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union acific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ain traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier rban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This onveniences drivers, hampers first responders, and violates the conditional use review criteria.

re review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose e Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ct recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans xpand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale r park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Iris Moore

No More Oil Trains Through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby ncreasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of he Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for he oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ccording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The dustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

pacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would versely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is raded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause erse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jon Eden

No more Oil Trains

Oakland, CA 94611

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for he oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

npacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would versely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is graded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic uld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause erse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

With kind regards,

Nance Wilson

Stand with the City of Mosier and suspend all oil train traffic

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is egraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ould adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause dverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated y viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County dinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia er. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is hibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of nts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any overed commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown tion into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbi River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans o expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale f our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That formation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

lly, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

k you this opportunity to comment and I look forward to your reply on this matter.

rely,

Sincerely,

jeff mcdermott

Oil trains Columbia River Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Riv Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of thi project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jerry Klemm

danger of oil trains

Upland, CA 91786

August 30, 2016

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River ge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for litional use review require a determination that the proposed use will not burden fire facilities and available ces, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for l train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Rive Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligh the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault fo the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

pacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Steven Guy

I URGE YOU TO DENY UNION PACIFIC RAILROAD's Application

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would caus adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the ommunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose tate Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely fect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that ny sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that e land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That ormation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a fessional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Thank yoy

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plan to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columb River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Thank you

John Morris

rdentown, NJ 08505

gust 30, 2016

r Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, olumbia River, public health, and the environment. This is particularly true in light of the proposals to build new and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal , and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would caus adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designat key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Colum River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting t cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the ommunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose tate Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely fect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that y sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That rmation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a essional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is ed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

, the project area has a very high probability of containing Native American cultural resource sites that could be sely affected in violation of County ordinance. These resources must be protected and proper consultation done.

you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Rive

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ins, and dangerous and volatile oil trains through the Gorge.

k you to deny this application for the following reasons:

de oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River ge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ct would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby asing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for tional use review require a determination that the proposed use will not burden fire facilities and available ces, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements o how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Uni Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could incre train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light o the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

mpacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of ow much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union acific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ain traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier rban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This conveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new rack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, he Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture eshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil k car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available ices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for il train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The try average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This nstrates the pattern of inadequate maintenance done by Union Pacific.

ts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. T inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansio

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

hank you this opportunity to comment and I look forward to your reply on this matter.

incerely,

ncerely, James Thompson

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train tra

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

npacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of w much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union cific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase n traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier an Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nveniences drivers, hampers first responders, and violates the conditional use review criteria.

review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the unity and surrounding environment, this project should be considered a new facility rather than an expansion.

larm to parks and recreation resources: The project would construct an additional rail line through Memaloose Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ecreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that e of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans nd Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ark land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely, James Thompson

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. Th inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloos State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adverse affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure th any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes pl to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sa of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings tha the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of train passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cau adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designa key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Colu River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species o

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

ore review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose te Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ct recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans xpand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ur park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that and is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That nation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ssional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is l necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

rude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River orge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby creasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available rvices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This monstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. Th inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

ncerely,

dam Savett

Santa Barbara, CA 93111

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trai passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

mpacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of ow much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union acific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ain traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier ban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This onveniences drivers, hampers first responders, and violates the conditional use review criteria.

e review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the munity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose e Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely t recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans oand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Rich Moser [not a typo]

Dear Angie Brewer,

Please stop oil trains in the Columbia Gorge. They are very dangerous, polluting, can destroy towns and kill many people. Our planet is heating up and we need to keep fossil fuels in the ground. The Columbia Gorge is beautiful and needs to stay that way. However, it will be trashed if oil trains are allowed to run through it and derail and explode.

Please do what you can to stop further oil trains through the gorge.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Rive Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could b adversely affected in violation of County ordinance. These resources must be protected and proper consultation dor

Thank you this opportunity to comment and I look forward to your reply on this matter.

ear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new l and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ns, and dangerous and volatile oil trains through the Gorge.

k you to deny this application for the following reasons:

de oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River e National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this t would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby sing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ional use review require a determination that the proposed use will not burden fire facilities and available es, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of sier incident, I ask you to deny the permit on these grounds.

he Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for rain derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ng to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. U Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could inc train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mo Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are dow inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Rive Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligh the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault fo the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any ncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia iver. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the olumbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean ater Act.

pacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of v much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union cific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase n traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier an Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nveniences drivers, hampers first responders, and violates the conditional use review criteria.

review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the unity and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

David Kreisman

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

rude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River orge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby reasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available vices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The stry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This onstrates the pattern of inadequate maintenance done by Union Pacific.

cts to the Columbia River Gorge National Scenic Area:

he project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through of the most highly protected lands in the National Scenic Area. The project could increase the number of trains g through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would ely affect scenic, natural, cultural and recreation resources and endanger local communities.

he project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is ed by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. Thi inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure tha any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plar to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

ngelica Palomo

IO more oil trains through the Columbia Gorge

sing, MI 48917

ust 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I strongly urge you to DENY this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I strongly urge you to DENY the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could b adversely affected in violation of County ordinance. These resources must be protected and proper consultation do

Thank you this opportunity to comment and I look forward to your reply on this matter.

ear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new l and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ns, and dangerous and volatile oil trains through the Gorge.

k you to deny this application for the following reasons:

de oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River e National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ct would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby

increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements o how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Uni

Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Annoe McCuen

Union Pacific Railroad tracks near Mosier

Camas, WA 98607

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hreshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil ank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this roject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby creasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for onditional use review require a determination that the proposed use will not burden fire facilities and available ervices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This monstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through e of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ng through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would rsely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is ded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

dverse impacts to scenic resources: The construction of double-tracking and related development would cause e impacts to scenic resources in violation of County ordinance, particularly the protected views from designated wing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Riv Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Carol Sword

August 30, 2016

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new rack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, he Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture eshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil k car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available vices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for il train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. T inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby creasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available rvices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This nonstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through e of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ng through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would rsely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is ded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Riv Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligh the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault fo the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of lants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any ncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia ver. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the olumbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean ater Act.

acts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union ific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier n Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. Th inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

incerely

like Seyfried

Charleston, SC 29412

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass throug some of the most highly protected lands in the National Scenic Area. The project could increase the number of tra passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

npacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of w much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union cific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase in traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier an Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nveniences drivers, hampers first responders, and violates the conditional use review criteria.

e review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the nunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that le of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans and Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Amy E Robertson

Deny new rail tracks

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for he oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This lemonstrates the pattern of inadequate maintenance done by Union Pacific.

mpacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through ome of the most highly protected lands in the National Scenic Area. The project could increase the number of trains assing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would dversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is egraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ould adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause verse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated y viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure tha any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plar to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

Our coastal and river regions are becoming more endangered due to the hazardous management of the railroad tracks and practices which endanger the lives and environment of our home areas. Please do your utmost to protect our homes and the lands we love. What a beautiful place and how sad to contemplate the horrible conditions that will arise with increased trafficking of oil and coal products.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cau adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designa key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

ore review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose ate Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ur park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That rmation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

mpacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through ome of the most highly protected lands in the National Scenic Area. The project could increase the number of trains assing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would dversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is egraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ould adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause dverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated y viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County dinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia ver. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is hibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plan to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columb River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

r Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, olumbia River, public health, and the environment. This is particularly true in light of the proposals to build new and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal , and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbi River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is deed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia ver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ally, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Gene Stubbs

No More Oil Trains in the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture eshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil k car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements o how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Un Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could incr train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That nformation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a rofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is deed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia iver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

nally, the project area has a very high probability of containing Native American cultural resource sites that could be versely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Riv Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of thi project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligl the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault f the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of lants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any ncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown llution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia ver. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the lumbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean ter Act.

acts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union fic had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier n Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This veniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby creasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available rvices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This monstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unio Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increa train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansio

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

hank you this opportunity to comment and I look forward to your reply on this matter.

incerely,

cerely,

da Maki

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Richard Walker

Oil Trains

PO Box 2824

Santa Cruz, CA 95060

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil ank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this roject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby ncreasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for onditional use review require a determination that the proposed use will not burden fire facilities and available ervices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for e oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ccording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The dustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

pacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through ne of the most highly protected lands in the National Scenic Area. The project could increase the number of trains sing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would ersely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is aded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause rse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated iewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure tha any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes pla to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sal of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would caus adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designat key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Colum River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the ommunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose tate Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely fect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that y sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That rmation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a fessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is ed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia r Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Bret Smith

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is egraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ould adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause dverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated y viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County dinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia er. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is hibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of nts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any overed commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown tion into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columb River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could adversely affected in violation of County ordinance. These resources must be protected and proper consultation d

Thank you this opportunity to comment and I look forward to your reply on this matter.

ar Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new k and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal s, and dangerous and volatile oil trains through the Gorge.

you to deny this application for the following reasons:

oil-by-rail threats:

he project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans o expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale f our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That formation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ally, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

erely,

Sincerely,

Richard & Sharon Erspamer

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Riv Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of thi project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligh

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Richard & Sharon Erspamer

Oil Trains and the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ins, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River ge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for litional use review require a determination that the proposed use will not burden fire facilities and available ces, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for l train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Un Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could inc train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mos Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are dow inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is ndeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia iver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

nally, the project area has a very high probability of containing Native American cultural resource sites that could be versely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans o expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That nformation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a rofessional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Carrie Darling

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for ne oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

pacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would versely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is raded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause rse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated iewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is ited in the Special Management Areas of the National Scenic Area.

hreats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plan to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columb River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Julie Taylor

No more oil trains through the Columbia Gorge

gust 30, 2016

r Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, olumbia River, public health, and the environment. This is particularly true in light of the proposals to build new and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal , and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans o expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale f our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That formation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a rofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is deed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia ver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ally, the project area has a very high probability of containing Native American cultural resource sites that could be versely affected in violation of County ordinance. These resources must be protected and proper consultation done.

ank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Dr. William 'Skip' Dykoski

Bomb Trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Ri

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause dverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated ey viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County rdinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia ver. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is ohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of nts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any covered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia er. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the umbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean er Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation don

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Riv Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of thi project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligl the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault f the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

acts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union fic had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier n Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

rude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River orge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby creasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available rvices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This monstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. T inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Dear Angie Brewer,

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would caus adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the ommunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose tate Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ffect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that ny sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that e land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That ormation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ofessional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Harold Watson

Union Pacific Railroad Proposed Project near Mosier, Oregon

Leavenworth, WA 98826-9114

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Mark Johnston

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new rack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, he Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal rains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

rude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River orge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby reasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available rvices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia R Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's c tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of t project would increase the number, length, and speed of trains passing through the Columbia River Gorge, there increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In l the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at faul the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requiremen According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any covered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

cts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

he project would harm the community of Mosier: The project would create a double-track through the Mosier Area, negatively impacting the local community and environment.

e proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Desiree Mendes

No more oil trains through the Columbia Gorge.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby ncreasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of he Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for he oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

mpacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unio Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increa train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosie Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansi

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

hank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass throug some of the most highly protected lands in the National Scenic Area. The project could increase the number of tra passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traf

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

pacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of w much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union cific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase n traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier an Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nveniences drivers, hampers first responders, and violates the conditional use review criteria.

review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the unity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that le of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans nd Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

ngie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would caus adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designat key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columb River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is deemed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columb River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could adversely affected in violation of County ordinance. These resources must be protected and proper consultation d

Thank you this opportunity to comment and I look forward to your reply on this matter.

725 N. Alberta St.

ortland, OR 97217

ugust 30, 2016

ar Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new k and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal s, and dangerous and volatile oil trains through the Gorge.

you to deny this application for the following reasons:

oil-by-rail threats:

he project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans o expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale f our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That formation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

lly, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

k you this opportunity to comment and I look forward to your reply on this matter.

rely,

Nancy Bishop

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia R Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's c tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of t project would increase the number, length, and speed of trains passing through the Columbia River Gorge, therel increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In li

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County rdinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia iver. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is ohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of nts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any covered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia r. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the mbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean r Act.

cts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of nuch this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase affic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could b adversely affected in violation of County ordinance. These resources must be protected and proper consultation dor

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ns, and dangerous and volatile oil trains through the Gorge.

k you to deny this application for the following reasons:

de oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River e National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ct would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby sing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ional use review require a determination that the proposed use will not burden fire facilities and available es, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of osier incident, I ask you to deny the permit on these grounds.

he Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for rain derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ing to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. U Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could in train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the M Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are do inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is deed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia iver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ally, the project area has a very high probability of containing Native American cultural resource sites that could be versely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby creasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available rvices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This nonstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through e of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would rsely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is ded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unio Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increa train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosie Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansi

- Harm to parks and recreation resources: The project would construct an additional rail line through Memal State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adve affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

dria, VA 22301-1519

30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light o the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trai passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would ca adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from design key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

re review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely impact recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that the sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Lisa Fues

Dear Angie Brewer,

Hauling oil is risky. Hauling it next to a river is more risk than we need to take. We have that situation in NH where I volunteer to assess the water quality of our rivers. I worry about the Cocheco River in Dover. The Oyster River in Durham, and the Lamprey River in Newmarket which are all identified as being in the "blast zone" at http://explosive-crude-by-rail.org/

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby

increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union

Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

Y VAY! NO WAY! What an insane proposal!

e stand to demand forever bans to all such proposals to prostitute and pollute our Columbia River gorge!
ROTECT!!! DO NOT POLLUTE!!!

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River ge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for itional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. U Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could in train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is deed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia ver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ally, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

rely,

ely,

an Simpson

September 4, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trai passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would

adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

npacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of ow much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union acific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase in traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier ban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This onveniences drivers, hampers first responders, and violates the conditional use review criteria.

e review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the munity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose e Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely

affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sharon Fetter

No more oil trains through the Columbia Gorge.

September 3, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hreshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil ank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this roject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby ncreasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for onditional use review require a determination that the proposed use will not burden fire facilities and available ervices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for e oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This monstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through e of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would rsely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is aded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic d adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause

adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. Th inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloo State Park, which would lead to trains traveling at higher speeds through the recreation area. This would advers affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure t any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes p to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the s of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings th the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That

information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

egards,

eorge Cleveland

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cau adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designa key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Colum

River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

ore review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose te Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ct recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans xpand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ur park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That mation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ssional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is d necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia

River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Maggie Davidson

September 3, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The ne
track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Ar

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application.

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

npacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would versely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is graded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic uld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause erse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia . Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is oited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columb River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could adversely affected in violation of County ordinance. These resources must be protected and proper consultation d

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Marcy Matasick

Mosier double track

Please do not allow the double track to be built in Mosier, or.
hey already have had a terrible accident with the derailment.
lore trains at a higher speed will bring more problems.

espectfully submitted, Ann Marie Jelderks

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light o the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of train passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cau adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designa

key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase rain traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This conveniences drivers, hampers first responders, and violates the conditional use review criteria.

ore review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose te Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ct recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans xpand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ur park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That mation must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through e of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would rsely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is ded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic l adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause se impacts to scenic resources in violation of County ordinance, particularly the protected views from designated ewing areas.

he proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ces and would have extreme scenic and recreation impacts.

arm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia illing these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is

prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. Th inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloo State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adverse affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure th any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes p to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the s of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings th the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Col River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Ron

ngie Brewer,

y concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new
d resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,
mbia River, public health, and the environment. This is particularly true in light of the proposals to build new

coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would caus adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designat key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Colum River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any

uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the ommunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose ate Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that y sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That rmation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a essional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is d necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

, the project area has a very high probability of containing Native American cultural resource sites that could be sely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The nev track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Are the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build ne coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any covered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could adversely affected in violation of County ordinance. These resources must be protected and proper consultation do

Thank you this opportunity to comment and I look forward to your reply on this matter.

eptember 3, 2016

ear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal s, and dangerous and volatile oil trains through the Gorge.

you to deny this application for the following reasons:

e oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River e National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture old of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil ar safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this t would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby

increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columb River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columb River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes th Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clea Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statemen how much this rail expansion would increase train traffic through the Gorge were significantly underestimated

Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans o expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale f our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That formation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a fessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ly, the project area has a very high probability of containing Native American cultural resource sites that could be rsely affected in violation of County ordinance. These resources must be protected and proper consultation done.

you this opportunity to comment and I look forward to your reply on this matter.

ly,

Dear Angie Brewer,

The Columbia Gorge is a national treasure. It deserves protection. I have driven it many times and feel strongly that it should not be threatened.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia R Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of project would increase the number, length, and speed of trains passing through the Columbia River Gorge, there increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause dverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated ey viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County rdinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia ver. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is hibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of nts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any overed commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown tion into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia . As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the mbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean r Act.

ts of more trains:

recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of uch this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation don

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Lynne Haagensen

Oil Trains are a disaster on wheels

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

rude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River orge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture reshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil nk car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this oject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby reasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available vices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The stry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This onstrates the pattern of inadequate maintenance done by Union Pacific.

ts to the Columbia River Gorge National Scenic Area:

he project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through of the most highly protected lands in the National Scenic Area. The project could increase the number of trains g through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would ely affect scenic, natural, cultural and recreation resources and endanger local communities.

e project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is ed by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. T inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansio

- Harm to parks and recreation resources: The project would construct an additional rail line through Memalo State Park, which would lead to trains traveling at higher speeds through the recreation area. This would advers affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings t

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

arole Ehrhardt

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light o the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trair passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would ca adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from design key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that the sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

David P Kallechey

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for he oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

pacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would ersely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is raded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause rse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated iewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is ited in the Special Management Areas of the National Scenic Area.

hreats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plan to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columb River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

r Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, olumbia River, public health, and the environment. This is particularly true in light of the proposals to build new nd crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal , and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would ca adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from design key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Colu River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attemptin cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blow pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This nconveniences drivers, hampers first responders, and violates the conditional use review criteria.

lore review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose te Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ct recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans xpand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ur park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that and is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That nation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a sional botanist hired by the applicant.

roject necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

he project area has a very high probability of containing Native American cultural resource sites that could be y affected in violation of County ordinance. These resources must be protected and proper consultation done.

u this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Riv Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of thi project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligl the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault f the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

acts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

THIS MORNING I READ A 48 PAGE PETITION FILED IN COURT by EarthJustice against the Army Corp of Engineers for illegally issuing multiple permits to build a Balken oil pipe line through the tribal lands in the Dakota's, e al, violations of water ways, wetlands Federal rules, etc.. UNION PACIFIC'S proposal to build mainline tracks through Mosier leads me to believe that the 'FIX IS IN' and Native Americans interests, as are those of all other citizens of this country, are for sale and exploitation.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sharon Conn

No More Oil Trains Along the Columbia!

ear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new l and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ns, and dangerous and volatile oil trains through the Gorge.

k you to deny this application for the following reasons:

le oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River e National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ct would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby sing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ional use review require a determination that the proposed use will not burden fire facilities and available es, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of sier incident, I ask you to deny the permit on these grounds.

he Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for

the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. U Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could in train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the M Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That nformation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a rofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is deed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia ver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ally, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

rely,

ely

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light c the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

mpacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of ow much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union acific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ain traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier rban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This conveniences drivers, hampers first responders, and violates the conditional use review criteria.

ore review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sandy Dumke

New Rail Track near Mosier OR

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

rude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River orge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture eshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil k car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available vices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The stry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This onstrates the pattern of inadequate maintenance done by Union Pacific.

cts to the Columbia River Gorge National Scenic Area:

he project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through of the most highly protected lands in the National Scenic Area. The project could increase the number of trains g through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would ely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increas train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. T inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansio

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloo State Park, which would lead to trains traveling at higher speeds through the recreation area. This would advers affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure t any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes p

to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light o the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trai passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would ca adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from design key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

mpacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of ow much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union acific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ain traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier rban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This onveniences drivers, hampers first responders, and violates the conditional use review criteria.

re review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose e Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely t recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans pand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale r park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that nd is either not needed for public use or that the sale would further the public interest.

JPRR excluded details on development within the Mosier Urban Area from the NSA application. That ation must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for he oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

npacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would versely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is graded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic uld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause erse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County nances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia . Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is bited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plan to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Colum River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, olumbia River, public health, and the environment. This is particularly true in light of the proposals to build new nd crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal

trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would caus adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columb River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown

pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that e land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That ormation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a fessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

lly, the project area has a very high probability of containing Native American cultural resource sites that could be rsely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Tracey Smallwood Katsouros

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The ne
track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Are
the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build n
coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal
trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through ome of the most highly protected lands in the National Scenic Area. The project could increase the number of trains assing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would dversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is egraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ould adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause verse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County nances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia r. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is ibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of s and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any ered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown on into waterways in violation of the Clean Water Act.

oal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the bia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could b adversely affected in violation of County ordinance. These resources must be protected and proper consultation do

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Anne Ekblad

Thank you for passing a moratorium on new fossil fuel projects!

ugust 30, 2016

ear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new l and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ns, and dangerous and volatile oil trains through the Gorge.

k you to deny this application for the following reasons:

de oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River e National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ct would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby asing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. U Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could in

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That formation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

lly, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

k you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia R Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's c tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of t project would increase the number, length, and speed of trains passing through the Columbia River Gorge, there increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fau the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requiremen According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia iver. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is ohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of nts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any overed commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia r. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the mbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean r Act.

ts of more trains:

recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of uch this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase affic by 10 times this amount, to up to 75 to 100 trains per day.

e project would harm the community of Mosier: The project would create a double-track through the Mosier Area, negatively impacting the local community and environment.

e proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This iences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new rack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, ne Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available ces, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for l train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This nstrates the pattern of inadequate maintenance done by Union Pacific.

s to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unio Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increa train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosie Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansi

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Rive Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligh the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault fo the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass throu some of the most highly protected lands in the National Scenic Area. The project could increase the number of t passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train tra

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

pacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of w much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union cific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase n traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier an Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This veniences drivers, hampers first responders, and violates the conditional use review criteria.

review needed:

he project should be reviewed as new development: Considering the size and potential impacts on the unity and surrounding environment, this project should be considered a new facility rather than an expansion.

arm to parks and recreation resources: The project would construct an additional rail line through Memaloose ark, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ecreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that e of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans nd Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ark land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you for this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hreshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil ank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this roject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby creasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for nditional use review require a determination that the proposed use will not burden fire facilities and available rvices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. cording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This nonstrates the pattern of inadequate maintenance done by Union Pacific.

acts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ng through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would sely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is ded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

dverse impacts to scenic resources: The construction of double-tracking and related development would cause e impacts to scenic resources in violation of County ordinance, particularly the protected views from designated wing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure tha any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plan to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Diane Nowak

Oil Trains through Columbia Gorge

ust 30, 2016

Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cau adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designa key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Colur River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

ore review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the mmunity and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose te Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ct recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans xpand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale ur park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that and is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That mation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ssional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is d necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The nev track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Are the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build ne coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal

trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills and explosions. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

mpacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through ome of the most highly protected lands in the National Scenic Area. The project could increase the number of trains assing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would dversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is egraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic ould adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause verse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated y viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County inances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia er. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is nibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of ts and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to s the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any vered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ion into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Angie Brewer,

very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, olumbia River, public health, and the environment. This is particularly true in light of the proposals to build new nd crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal and dangerous and volatile oil trains through the Gorge.

ou to deny this application for the following reasons:

oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columb River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbi River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely ffect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that ny sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that e land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That ormation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a fessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ly, the project area has a very high probability of containing Native American cultural resource sites that could be rsely affected in violation of County ordinance. These resources must be protected and proper consultation done.

k you this opportunity to comment and I look forward to your reply on this matter.

ely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Ri Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oi tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of th project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereb increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County rdinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia iver. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is ohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of ants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to ss the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any covered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia er. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the umbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean er Act.

cts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union c had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could b adversely affected in violation of County ordinance. These resources must be protected and proper consultation don

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Stephen Condit

Oil Trains are Dangerous

Milan, MI 48160

August 30, 2016

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ins, and dangerous and volatile oil trains through the Gorge.

k you to deny this application for the following reasons:

de oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River ge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture shold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ct would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby asing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for tional use review require a determination that the proposed use will not burden fire facilities and available es, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of osier incident, I ask you to deny the permit on these grounds.

he Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unic Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increa train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosie Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is ndeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

inally, the project area has a very high probability of containing Native American cultural resource sites that could be dversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

hank you this opportunity to comment and I look forward to your reply on this matter.

ncerely,

cerely,

ther Hamilton Burda

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia Rive Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In ligh the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault fo the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any ncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown ollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia iver. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the olumbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean ater Act.

pacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of v much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union ific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier an Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This veniences drivers, hampers first responders, and violates the conditional use review criteria.

review needed:

he project should be reviewed as new development: Considering the size and potential impacts on the unity and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

I have lived in the Columbia Gorge area since 1947 and care about it very much. This letter sums up my concerns very well. We have all seen the scenes of huge explosions & fires caused by oil trains, the one in Mosier was just a tiny episode. I don't want any more, even that small. This letter explains the other concerns I had as well. PLEASE don't allow more oil trains in the Columbia Gorge; limiting it so even fewer would be even better. How about NONE!

Sincerely,

Sincerely,

Marina Slaton

Please deny application for new train tracks

Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

sk you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture eshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil k car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ect would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available ices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for il train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unio Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could incre train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosie Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down.

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is ndeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

inally, the project area has a very high probability of containing Native American cultural resource sites that could be dversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

ank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

npacts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of ow much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union acific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase ain traffic by 10 times this amount, to up to 75 to 100 trains per day.

The project would harm the community of Mosier: The project would create a double-track through the Mosier ban Area, negatively impacting the local community and environment.

The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This onveniences drivers, hampers first responders, and violates the conditional use review criteria.

re review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Joel Kaplan

newberg, OR 97132

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture hreshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil ank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this roject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby ncreasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for onditional use review require a determination that the proposed use will not burden fire facilities and available ervices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of e Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for e oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ccording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The dustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This monstrates the pattern of inadequate maintenance done by Union Pacific.

pacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through ne of the most highly protected lands in the National Scenic Area. The project could increase the number of trains sing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would ersely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increa train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. T inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansio

- Harm to parks and recreation resources: The project would construct an additional rail line through Memalo State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adver affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

incerely,

ank you

Oakland, CA 94601

August 30, 2016

Dear Angie Brewer,

Though I live in California, much of my family lives in Oregon and I've spent some of my best times on the banks of the Colombia. I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for he oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The ndustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

npacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would versely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is graded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic uld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause erse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County nances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia r. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is bited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

ear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, e Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new al and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal

trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designate key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbi River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown

pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that e land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That ormation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a fessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is eed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia er Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

lly, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Ann Kuter

Oil trains in the Columba Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia river. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any covered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia river. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could adversely affected in violation of County ordinance. These resources must be protected and proper consultation do

Thank you this opportunity to comment and I look forward to your reply on this matter.

Beavercreek, OR 97004

ugust 30, 2016

ear Angie Brewer,

m very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new ck and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal s, and dangerous and volatile oil trains through the Gorge.

you to deny this application for the following reasons:

e oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River e National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture old of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil ar safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this t would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby sing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. U Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could in

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that he land is either not needed for public use or that the sale would further the public interest.

UPRR excluded details on development within the Mosier Urban Area from the NSA application. That nformation must be considered as part of NSA cumulative impacts analysis.

The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a ofessional botanist hired by the applicant.

Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is leed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia ver Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

ally, the project area has a very high probability of containing Native American cultural resource sites that could be ersely affected in violation of County ordinance. These resources must be protected and proper consultation done.

nk you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia R Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's o tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of th project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereb increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In li the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirement According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

Bridges: New bridge construction would provide a potential location of new point source pollution if any covered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

cts of more trains:

A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase traffic by 10 times this amount, to up to 75 to 100 trains per day.

he project would harm the community of Mosier: The project would create a double-track through the Mosier Area, negatively impacting the local community and environment.

he proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new rack and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, he Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new oal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal ains, and dangerous and volatile oil trains through the Gorge.

ask you to deny this application for the following reasons:

ude oil-by-rail threats:

The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River rge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture eshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil k car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this ject would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby easing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for ditional use review require a determination that the proposed use will not burden fire facilities and available ices, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for il train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. rding to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The try average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This nstrates the pattern of inadequate maintenance done by Union Pacific.

ts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Unio Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increa train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosie Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansi

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby ncreasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of he Mosier incident, I ask you to deny the permit on these grounds.

The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for ne oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. ccording to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The dustry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This emonstrates the pattern of inadequate maintenance done by Union Pacific.

pacts to the Columbia River Gorge National Scenic Area:

The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through me of the most highly protected lands in the National Scenic Area. The project could increase the number of trains ssing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would versely affect scenic, natural, cultural and recreation resources and endanger local communities.

The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is raded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic uld adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Adverse impacts to scenic resources: The construction of double-tracking and related development would cause erse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated viewing areas.

The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure tha any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes pla to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sal of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Earl Grove

ust 30, 2016

Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Colleen McGlone

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Personal Note:

Fossil fuel is outdated and has no place anywhere

on this Earth in the 21st Century and beyond!

It's time to invest in solar and wind and keep

oil and coal buried in the ground once and for all!

Sincerely,

Billy "The WiZaRd" Angus

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Margarita Perez

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Matt Hagen

No more oil trains through the Columbia Gorge.

Great Falls, MT 59405

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Tom Glover

Oil on the rails

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Charles Arnold

Lansdowne, PA 19050

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

James Keenan

New Rail near Mosier, OR.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely

Cassandra Treppeda

Deny coal trains

Navarre, FL 32566

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Charlotte M. Walker

Oil trains

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Clayton Jones

No more oil trains through the Columbia Gorge.

Tukwila, WA 98168

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Clayton Jones

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Ardeth L. Weed

No more oil trains in Columbia River Gorge

Dear Angie Brewer,

Union Pacific Railroad's application to construct a new rail track near Mosier, OR must be denied.

* National Scenic Area of the Columbia River is an unforgettable national treasure.

* Crude oil-by-rail is a reckless operation asking for catastrophic derailments involving oil spills, explosions and fires.

* Federal Railroad Administration (FRA) found that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

* The project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. Native land must be protected.

* This is NOT the time to destroy more environment.

* This in NOT the time to enhance the global climate crisis.

And with best wishes and kind regards,

I remain faithfully yours,

trusting that you will do everything that is needed

to stop this insane application.

Thank you.

Malgorzata Schmidt MD, PhD

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

UGLY BAD IDEA!!! STOP THIS CRAP!!!

John Goeckermann

Stop oil trains going through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

My daughter lives in Oregon and I sometimes drive through the Columbia River Gorge. I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Deborah Reade

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal

trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown

pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

As many other concerned for the environment and the damage any oil spill would cause, I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application. Here are some reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your final decision on protecting our resources.

Sincerely,

Terri Alexander

Coal and oil shipping dangers

Boise, ID 83703

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would

adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely

affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Ann Ford

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause

adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That

information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean

Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Samuel Durkin

Union Pacific RR's plan for new track along the Columbia River

Seattle, WA 98122-5706

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this

project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of

how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sandra Smith

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for

the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sarah Collmer

Oil trains through Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Carol Patton

Union Pacific's failure to adequately maintain its tracks

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Diane Krassenstein

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Michael MacDougall

Union Pacific Railroad aplication

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Tara Kerr

New York, NY 10036

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Joanna

Oil trains through Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length, and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions, and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR, because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44%, and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge, and the speed of trains. This would adversely affect scenic, natural, cultural, and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed six-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by five to seven trains per day, while the report finds it could increase train traffic by ten times this amount, to up to seventy-five to one hundred trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: The OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment, and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Laurie Sandretto

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Robert Burnett

Columbia Gorge oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

James Stamos

No more oil trains through the Columbia Gorge.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Michelle Miranda

No OIL TRAINS!

3320 Jackson Street SE

Albany, OR 97322

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Lars Jefferson

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Robert G Bachman

Bend, OR 97702

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Matthew Gray

Oil trains through the Columbia River Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

If you want to ruin a place that breathtakingly beautiful, running oil trains through surely is a good way to do that.

Sincerely,

Sincerely, David Dragavon

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Eric J. Bard

Oil trains in the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean

Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Cynthia Hart

No more oil trains through the Columbia Gorge!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this

project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of

how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans

to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Marie Garescher

Oil Train Disasters

Tarrytown, NY 10591

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Marie Garescher

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Georgia Griffin

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Jack West

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

patrick mulcahey

Oil Trains

CHAPEL HILL, NC 27517

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Anita Shanker

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal

trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown

pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Shannon Baker

Oil transport by rail

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Donna Cosgrove

Union Pacific's failure to adequately maintain its tracks.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia

River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.
