- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jane Spaeth

Oil trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Mrs. Fugle

Please deny the new rail track!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Frederick Hamilton

Expanding Unions Pacific track in Oregon

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Lauren Schiffman

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

karl armens

Oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Randy Harrison

SIERRA CLUB
OREGON CHAPTER

September 6, 2016

Wasco County Planning Commission

Re: PLASAR-15-01-0004 PLASAR-15-01-000, UPRR Second Mainline Track Project – Wasco County, Oregon

The Oregon Chapter of the Sierra Club is opposed to granting Union Pacific a permit for this proposed project and requests that the permit be denied.

We ask that the Planning Commission recognize that approving this project will have wide ranging negative impacts both within Wasco County but also all along the entire from 185 mile mainline track between Hinkle and Portland, Oregon (and beyond).

As a member of the Stand Up To Oil Coalition, the Sierra Club is completely aligned with the coalition's position on denying this permit, which comments have been filed separately.

It would take far longer than the few short minutes allowed for public testimony to detail all the reasons that this permit should be denied. They can summarized in the following bullet points:

- The whole purpose of this project is to increase rail traffic. This will lead to:
  - Increased risk of accidents, including explosive derailments such as the recent incident in Mosier.
  - Increased delays for emergency responders needing to cross the tracks.
  - Increased environmental damage to the environmentally sensitive Columbia River estuary with impacts on the river's endangered salmon species.
  - Increased health impacts to the communities along the rail lines owing to increased diesel fumes.
  - Increased adverse effects to scenic, natural, cultural and recreation resources of the Columbia River Gorge National Scenic Area.
- The construction associated with this project will cause harm to wetlands owing to the large amounts of fill required.
- This project will violate the Treaty rights of the several tribes in the Columbia River Estuary. The Sierra Club does not speak for the tribes but is committed to support of their treaty rights. Among the impacts to the tribes are:
  - Potential violation of Native American cultural resource sites.
  - Increased risks to tribal members seeking to access the river to exercise their traditional fishing sites.
  - Increased impacts to the culturally and nutritionally important salmon species which are listed as endangered species.

In summary, approving this project is not in the interest of people or the environment.

The Oregon Chapter of the Sierra Club urges the Wasco County Planning Commission to deny the permit for this project.

Thank you for your consideration of our comments.

RE: Union Pacific Rail Road Application File number PLASAR-15-01-0004

Dear Ms. Brewer:

The mission of the Hood River Valley Residents Committee is to protect Hood River's farms, forests, and the livability of its cities and rural communities by promoting wise land use decisions. We appreciate the opportunity to comment on Union Pacific Rail Road's proposal to construct new track near Mosier, Oregon. While Mosier is in Wasco County, expanding the tracks there will lead to increased train traffic and increased safety risk all along the Columbia River, including to Hood River County.

The transportation of oil and other toxic substances by rail through the Columbia River Gorge threatens all of what we hold dear and strive to protect. It is one very bad land use decision. The derailment of oil cars in Mosier on June 3, clearly demonstrates how this continued dangerous action on the part of the fossil fuel and railroad industries has moved from looming threat to reality in the Gorge. The freakish part of this incident is not that it happened, but that it wasn't a full-blown disaster. With our typical Gorge winds this incident could have incinerated our citizens, destroyed the town of Mosier and spread to forests, farms, decimated our National Scenic treasure and polluted our priceless natural resources.

There is the obvious call for Union Pacific and other railway companies to rise to much higher safety standards and the need for more robust Federal and State safety oversight. Neither of those things have happened and yet, Union Pacific has now applied to expand the mainline track to carry an even larger volume of potentially hazardous cargo at higher speeds.

Land use regulations were invented more than a century ago as cities sought to address health and safety concerns. This application fits squarely into the "health and safety" category. Given Union Pacific's poor maintenance and safety record, and the volatility of some of the cargo that will be transported by the tracks, we recommend that you **deny** Union Pacific's application.

Thank you for the opportunity to comment.

Best regards,

Heather Staten

Tomorrow's planning commission meeting

1 message

you know who <didisaywho@gmail.com> Tue, Sep 6, 2016 at 12:41 AM
To: angieb@co.wasco.or.us

Hello Angie,

I hope to be able to have a chance to voice my concerns in person at tomorrow's meeting,but I may have to bolt to Portland mid-day so please consider my, different perhaps, perspective on the issue at hand.

I moved to Wasco County in 1991 soon after the enactment of the CRGNSA.
I LOVE this place. It is the home that I have dreamed about all my life,BUT I have made major concessions to honor the building (development) restrictions within the National Scenic Area. Working with Wasco County planning I have had to compromise my ideal home design(installing solar panels for energy efficiency, metal roofing for fire protection and site/ structure placement)for the greater good of reflectivity issues pertaining to key viewing areas. I get that. The greater good.

Had the Union Pacific Railroad been able to complete their goal of more rail traffic through the Gorge prior to the enactment of the Scenic Act,it would be the status quo,and we would have to live with it.
And, if I had built my home prior to the same enactment,I would have all that I had desired for my energy efficiency and fire safety needs and I would not be petitioning you now to apply the same vision and responsibility of the Scenic Act that applies to all parties-personal or corporate, in the decision that is now in your hands.

But this is now,and the Columbia River Gorge Scenic Act is front and center here,and I AM petitioning.
In fairness to residents,homeowners,visitors,fish and wildlife,all those downstream/downwind with a vested interest in our slice of heaven,PLEASE see how important your decision is.

I have many other issues with the rail expansion that others will no doubt represent for me as well,but I appreciate your time to consider my different point of view.

Respectfully,

September 6, 2016

Dear Angie Brewer,

I am a native Oregon and I've lived here for over 68 years. This place MUST be protected from pollution of all kinds. For the sake of our children and grand children, we MUST stand firm and do everything we can to keep ALL fossil fuels in the ground.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.
- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

PC 2 2-3678

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.
- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. New Rail Track

1 message

Judy Epstein <judyepstein1@gmail.com>
Reply-To: judyepstein1@gmail.com
To: angieb@co.wasco.or.us

Mon, Sep 5, 2016 at 4:30 PM

Judy Epstein
3449 Garfield Ave. S.
Minneapolis, MN 55408-4213

September 5, 2016

Dear Angie Brewer,

I am extremely concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. Why? Because the new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and DANGEROUS & VOLATILE oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.
- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.
- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered

commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.
- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.
- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,
Judy Epstein

September 5, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.
- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.
- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered

commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.
- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.
- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,
Natasha Saravanja

The Dalles, OR 97058

Greetings,

I am a resident of both Hood River and Multnomah Counties. My husband and I love the Gorge and spend a lot of time there. We have been concerned about the oil trains for some time and then the accident and fire in Mosier brought home our worries.

Now Union Pacific not only wants to continue their transport of the highly volatile oil but to increase the number and length of the trains and add tracks in Wasco County. We oppose this plan.

By running next to the water, trains in the Gorge threaten the ecosystem and the livelihood of many residents. If there is an oil spill into the Columbia it would pollute the river for miles and wreak havoc with the ecology and use of the river.

Fire is a proven risk. This time Mosier got off without extensive damage but if there is another fire, it endangers Mosier or other small towns with much more significant damage .

I request that Wasco County deny the application for the Union Pacific Railroad expansion.

Sincerely,

Paulette Wittwer

Dear Angie Brewer,

Thank you for your service, and for your attention to public comments.

While I don't have standing to speak on this as a Gorge resident, I am a frequent visitor because my mother in law (and my children's grandmother), Hanna Metzger, lives in Hood River, and we visit frequently. The Twin Tunnels trail between Hood River and Mosier is one of my favorite places in the world. The Gorge is a national treasure, and we all want its beauty preserved.

1) The project should be denied due to oil train safety concerns. After the derailment and explosion, Union Pacific has no safety credibility. We might have expected a big project to increase safety along the length of the Gorge, but instead, UP is talking about expanding capacity. Please don't allow an expansion that would increase oil train capacity through the Gorge.

2) This project should be denied to preserve the precious environment in the Gorge. The expansion is an ecological disaster, with increased emissions, adding fills to sensitive wetlands, adding a large gravel crushing area immediately adjacent to Memaloose state park, Clean Water Act violations from coal dust, adverse impacts to threatened plant and animal species, whew! Most of these are, in addition to being wrong, actually illegal, giving great grounds for denial.

3) This project should be denied out of respect for the community of Mosier. Mosier has already suffered enough. Of all the places where UP could build a project with obviously adverse effects to the surrounding neighborhood, I would expect them NOT to do this in Mosier.

4) This project should be denied so that first-responders can continue to do their jobs in the Gorge: more trains means more crossings, and with miles long oil trains, multiple crossings per day don't just mean a possibility of disaster, it means certain harm. It means over time, certainty that multiple ambulances and fire crews will fail to make it to their destinations in time to save lives. These tracks and crossings were built in an era of shorter trains. Expansions to allow more of the very long trains to pass through the Gorge should not be allowed.

Thank you again for all your work.

Please deny this permit.

Sincerely,
Alice Lockhart

Angie Brewer <angieb@co.wasco.or.us>

the Union Pacific application for expanding rail track along the Columbia Gorge, File number PLASAR-15-01-0004

1 message

Nancy Harrison <nlpaisner84@alumni.amherst.edu> Mon, Sep 5, 2016 at 10:52 AM
To: angieb@co.wasco.or.us

Dear Ms. Brewer,

I am writing to add my voice in opposition toany expansion of rail track along the Gorge.

Only 3 months ago, the accident in Mosier showed us how dangerous the current rail situation is. The idea of adding more trains, rather than imposing some regulations to make the ones already on the line safer, strikes me as a very dangerous thing to do.

The fact that Union Pacific so quickly started running oil trains through the Gorge after this disaster, despite requests from the government of Mosier as well as Governor Brown and our Congressional representation that they halt oil shipments until the safety issues could be addressed, demonstrates that Union Pacific cares nothing for the safety of our communities and environment. Union Pacific is not to be trusted, and any effort to expand or continue oil shipments through the Gorge should be halted.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and explosive oil trains through the Gorge. I ask you to deny this application for the following reasons:

• Increase in oil-by-rail: The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase number, length, and speed of trains passing through the Columbia River Gorge, thereby increase the risks of catastrophic accidents involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

• The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

• A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

• The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

• The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

• The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely

PC 2 2-3694

affect air quality and visibility. This violates at least one of the criteria for conditional use review.

• The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion. These are new tracks and thus a new use.

• The project is not necessary to provide a public service. Union Pacific currently provides adequate rail service through the Columbia River Gorge. Even if the project is necessary, there are alternatives that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

• Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

•The proposed 6 acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

• Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

• Threats to protected cultural resources: The project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance.

• Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

Sincerely,
Nancy Harrison

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.
- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.
- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered

commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.
- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.
- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,
Darlene Wolf

September 5, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.
- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.
- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered

commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.
- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.
- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,
Darlene Wolf

PC 2 2-3699

Testimony before Wasco County Planning Commission: September 6, 2016

Re: Union Pacific Railroad proposed double track project in Wasco County

PLASAR-15-01-0004

My name is William White, and I live full time in Mosier, Oregon. My wife and I moved to Mosier in 2007, attracted by the beauty and tranquility of the Columbia River Gorge, together with the assurance that the National Scenic Area designation would help to protect these qualities in the Gorge.

The current Union Pacific application to construct a second railroad line, roughly centered on the town of Mosier, would significantly degrade many of the qualities that originally drew us to this area. We request that Wasco County deny the Union Pacific application for the following reasons:

Increased train traffic: The new double track would dramatically increase the number, size, and speed of trains that currently move through Wasco County and the town of Mosier. According to railroad experts Terry Whiteside and Gerald Fauth III, the Mosier double tracking project, coupled with the proposed modern train signaling, would provide infrastructure to increase rail traffic through Mosier by 45 to 52 trains per day. This dramatic increase in train traffic would create more noise and pollution, as well as a demonstrated danger of fire and explosions. In addition, the increased length and number of trains would result in more frequent traffic interruptions for citizens and first responders at all railroad crossings.

While Union Pacific has stated that they are not building the second line in order to increase shipments through the Gorge, the facts are that the number of railroad cars moved through Oregon by Union Pacific has increased by 27% between 2013 and 2015 alone. (Whiteside and Fauth testimony, Figure 2)

Impact on National Scenic Area: The proposed second mainline track will negatively impact the Columbia Gorge National Scenic Area by constructing new roads and bridges, blasting through existing mesas and crushing the resulting rock debris on site, disturbing areas likely containing historic Native American artifacts, and altering setbacks for scenic travel corridors, wetlands, and sensitive plant buffer areas.

The Columbia River Gorge National Scenic Act it mandated that development actions not adversely affect the scenic, cultural, recreation, and natural resources of the National Scenic Area - including actions which are individually insignificant but which may have cumulatively significant impacts. Furthermore, the Oregon Supreme Court found that an applicant must accept any conditions that are necessary to ensure that a development take place without affecting scenic resources. Based on my reading of materials from a variety of experts, I do not believe the Union Pacific application meets these standards

Impact on Memaloose State park: The proposal would definitely have a negative impact on Memaloose State Park. The Oregon Parks & Recreation Department Commission in April directed staff to stop negotiations with Union Pacific for a land transfer that would have allowed the company to build a second track through Memaloose State Park. The Parks Commission found no overall benefit to state park system, and cited public safety and state liability as reasons to reject the land transfer.

Thus Union Pacific's application is based on inaccurate assumptions because it relies on a land transfer that will not take place.

Increased oil and coal shipments: The proposed new second line will likely result in many more oil trains passing through Wasco County. The county's Planning Staff report notes that Union Pacific claims the commodities currently transported are not proposed to be altered by the proposed track development. However, the railroad also acknowledged that the commodities carried are driven by current market demand. (pg. 32)

According to the federal Surface Transportation Board statistics, Union Pacific revenues from oil shipments skyrocketed from $18 million in 2010 to well over $400 million in 2013 and 2014. The rush to move highly-volatile Bakkan crude oil from North Dakota and Montana gave a huge financial boost to Union Pacific. While the level of shipments eased off in 2015, it is clear that the commodities shipped through the Gorge by UP are primarily driven by demand and profits.

The fact that Congress has removed the prohibition on exporting crude oil and demand for coal is growing in Asia, when added to the proposed development of oil and coal shipping facilities in the Pacific Northwest, opens the door to the Columbia Gorge becoming the preferred conduit for fossil fuel shipments. Whiteside and Faust conclude that "UP clearly has its eyes focused on increasing oil and export coal shipments to the Pacific Northwest. We estimate that it is reasonable to assume that UP anticipates 6 to 12 additional oil trains per day and 5 to 10 export coal trains per day through Mosier, which would equal 36 to 57 trains per day." (Page 8)

While coal use is declining in the United States, huge inventories of coal in this country have created a surge in rail shipments of coal through the Gorge for shipment to Asia. In addition to the dangers posed by burning coal in countries with weak environmental regulations on coal, the dust from uncovered coal cars directly impacts the Gorge.

According to a recent study by Dr. Daniel Jaffe of the University of Washington, rail shipment of uncovered coal results in respirable particulate levels twice as high as those emitted by other diesel trains. This creates health hazards and degrades air quality for residents of Wasco County and the Columbia Gorge. If the double track proposal is approved and the demand for

coal exports continues to grow, more coal will be transported by Union Pacific on the Oregon side of the river.

Safety: Union Pacific's poor safety record is very troubling. The railroad's rate of accidents per one million train miles travelled is 22% above the industry average. Oregon officials said the tracks near Mosier were inspected on April 27, just weeks before the June 3 derailment, using methods designed to ensure the tracks were safe enough to carry crude oil trains.

In Mosier 16 of the 96 oil cars derailed, one tank car was punctured, the volatile Bakkan crude ignited, and three additional tank cars caught on fire. I was in Mosier shortly after the train derailed. The wind was unusually still for a summer day in the Gorge. If winds had been in the neighborhood of 20 miles per hour, the explosions and resulting fire damage would have been dramatically worse. Many people could have been wounded or killed, and the Mosier elementary school and other facilities would have been imperiled.

On June 23rd, the Federal Railroad Administration determined that "Union Pacific's failure to maintain its track and track equipment resulted in the derailment."

Railroad experts Whiteside and Fauth reported that "while there may be some improvements compared to the current operations over the line – such as reducing noise and emissions from idling locomotives – these purported benefits will be more than offset by new health and safety problems associated with the increased traffic levels through Mosier. More trains through Mosier means more train noise, more train emissions and increased potential for rail accidents and spills.

The final statement of their testimony concludes that "the increase in train traffic that this proposed project would allow will make Mosier and Wasco County more dangerous places to live."

The city of Mosier, having witnessed first-hand the derailment of a Union Pacific oil train, has gone on record opposing the application for a second rail line, and I support this position.

Lack of state oversight: It is important to note that Washington and California recently passed laws giving state government new oversight of a railroad company's response to oil train crashes. Those laws include requirements that railroads file emergency response plans, new taxes on oil-by-rail shipments to fund preparedness and a mandate that railroads must show whether they can cover the cost of a worst-case oil train spill. Just a year before the Mosier derailment, Union Pacific lobbied against similar legislation giving the state of Oregon increased oversite of oil train crashes, and the bill (HB 3225) was later gutted.

Lack of local control: I have read the report of the Wasco County Planning Staff, and commend the careful work that their summary represents. I strongly agree with some of the conditions proposed by the staff report, including the requirement the number of trains not be allowed to

increase, that coal cars be covered, and that Union Pacific provide training and consider assisting with needed supplies and equipment for fire departments in the Gorge.

While I agree with conditions such as those proposed by planning staff, I do not believe that Union Pacific is likely to comply with such standards. Railroads have historically taken the position that they are regulated at the federal level, and they have opposed standards being set by local governments. I know of no powers possessed by Wasco County that would ensure that trains that begin their trip one or two thousand miles to the east of Oregon will comply with local standards once they reach the border of Wasco County.

Accordingly, I urge our Planning Commission to reject the Union Pacific application for a second mainline track through portions of Wasco County.

RE: Union Pacific Rail Double-track Application, File number PLASAR-15-01-0004

Dear Wasco County Planning Commission:

My name is Kristine Harter. I live at 2225 Dundas Way in Mosier, Oregon.

Thank you for the opportunity to state my opinion on the Union Pacific application above.

When I first heard of the proposal to build an entirely new, additional set of tracks and other infrastructure through a part of the Columbia Gorge Scenic Area on either side of the town of Mosier, it concerned me. It sounded like a hugely expensive and disruptive project for a stated goal to improve the present level of train services provided by Union Pacific.

Around the same time, I had become aware of what seemed like an increase in the number of trains I saw and heard coming through the gorge, specifically, in trains with oil cars. I began to hear more about proposals for oil refineries up and down the coasts of Oregon and Washington to refine the increasing crude oil coming through the Gorge from extraction areas in the Dakotas, Alaska and Canada.

As I became more concerned about Union Pacific's proposal, I read through the their application itself, through testimonies of experts in the environmental impact of rail transport in particular and in the transport of coal and oil specifically. Twice, I made plans to come to this hearing to give my opinion.

As you know, this is the third date for this hearing; the second postponement was after the derailment and fire in Mosier, an event that by the time it happened, seemed predictable and unprepared for.

Most recently, I have read through the one hundred pages or so of your commission's staff recommendations on this application.

Although I commend the staff for recommending conditions such as covering coal cars, provision of regular training to Gorge fire departments, wetland mitigation and rehabilitation plans for disruption to the environment, I strongly disagree with their recommendation to approve the project.

I think that the application should be denied. I do not believe that the conditions can be adequately monitored. I am very concerned that Union Pacific is not being up front about its reasons for wanting to do a major construction project on the tracks in and around Mosier.

After my readings and after my experience with Union Pacific's response to the derailment on June 3, I do not believe that this company has the necessary commitment to safety and accountability to people who live, work and recreate along their train routes. In considering a

project such as this which will certainly be disruptive for months and months and could potentially be disastrous, I consider a strong commitment to safety concerns essential.

According to Union Pacific, "the primary change in operation resulting from the new second mainline track will be to address the inadequate infrastructure and safety concerns in the project location to improve operational inefficiencies by reducing the duration of train idling, maintaining standard operating speed, improving the ability of trains to safely pass one another, and reducing limitations to using efficient longer trains." They state that they "typically move 20 to 30 trains a day through the project area," and anticipate a "similar number of daily trains with implementation of the proposed project."

I am concerned by the vague language used in Union Pacific's application. What is the "standard operating speed" which they will be maintaining? How long are "efficient longer trains"? Even if a "similar number of daily trains" passes through on the new tracks, don't longer trains mean more cars, and effectively more trains?

Union Pacific does not focus on specifics, as above, or on the disruption caused for months by construction. Instead they stress how not much will change after the expansion is completed, as in, "Once constructed, the second mainline track will operate similar to the existing rail line, in that it will continue to move a wide array of commodities through the Columbia River Gorge." They state that the "proposed project is not linked to the transport of any single commodity, nor is it a response to a planned rapid expansion of rail services."

In their recommendation, your staff elaborates on the "wide array of commodities" that UPRR currently moves through Oregon, specifically mentioning, grain, automobiles, lumber, cement, apparel and consumer electronics. Nowhere in either of these statements is the commodity, "crude oil," mentioned. Yet data from the 2016 federal Surface Transportation Board Freight Commodities Statistics show that from 2010 to 2015, Union Pacific saw a 1300% increase in revenue from oil shipments.

It is commendable that the Planning Commission staff included a condition for regular training of Gorge fire departments in their recommendations. In the wake of the near disaster in Mosier on June 3rd, it is clear to me that much more than that condition is needed.

Washington and California recently passed laws giving state government new oversight of a railroad company's response to oil train crashes. Those laws include requirements that railroads file emergency response plans, new taxes on oil-by-rail shipments to fund preparedness and a mandate that railroads must show whether they can cover the cost of a worst-case oil train spill. Just a year before the Mosier derailment, Union Pacific lobbied against similar legislation giving the state of Oregon increased oversight of oil train crashes, and the bill (HB 3225) was later gutted.

After the derailment in Mosier, the Federal Railroad Administration (FRA) released a report finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific.

On June 3rd, on the very route proposed and operated by Union Pacific, a disaster did not happen. Most of us who live in the area believe that a major fire and potential loss of lives and homes were narrowly averted because it was an unusually calm day in the Gorge.

One would think that after such a warning as occurred in Mosier, a company applying to increase the risk of such an accident would do all that it could to reassure residents of the Gorge. Instead, just days after the accident, and before all the damaged cars had been removed from the tracks, residents drove through a town that looked under siege. The main Union Pacific presence that I was aware of were company police in uniforms who could not answer any of our questions because they had been flown in from somewhere else. We experienced traffic delays as the mess was cleaned up and train traffic resumed through the town.

Although asked by the town of Mosier and local, state and national elected officials to cease shipments of oil by train at least until a federal railway investigation had been completed, within three weeks after the accident, Union Pacific had resumed oil shipments. Their response was that they are required by the federal common carrier obligation to carry crude oil and other hazardous materials.

I urge you to do all within your abilities to deny this application. There are too many unanswered questions and too much potential for danger to support such a project.

Sincerely,

Kristine Harter

Wasco Co. Planning Director

6 September 2016

RE: Proposed second rail line past Mosier, Oregon (through Wasco Co. and the Columbia Gorge National Scenic Area)

Dear Sirs and Madames,

My concern is more global that most of the comments you will receive. The entire world is in a climate-change crisis: not only warming but massive rain-storm floods in places, prolonged droughts in other places, rising sea levels on all coasts, tropical species including disease vectors moving poleward (think Zika), ocean acidification and the list goes on.

The undoubted cause is increasing carbon dioxide from fossil fuel burning. The first step in damping that cause is NO NEW FOSSIL FUEL INFRASTRUCTURE. The proposed second rail line proposed by Union Pacific is exactly that. Do not issue permits for the line. Do not issue permits for rock crushing near Memaloose State Park. Just say NO. I realize that the decisions will largely rest with the Federal Railway Administration. However, the voice of the Wasco County Commission will carry moral authority, a voice from the people "on the ground." Use that voice. Thank you.

Charles B. Miller, Ph.D.
1320 NW 30th Street
Corvallis, Oregon 97330

charlie@arietellus.com

September 5, 2016

Dear Wasco County Planning Commission,

Union Pacific's request to double-track trains through Mosier should be denied as it would create an unacceptable risk to both people and the environment in what are the most sensitive lands in the Columbia River Gorge. The proposed conditions don't remove this risk.

In regards to the staff recommended conditions of approval, who would monitor and enforce these conditions? UPRR has said it is regulated by federal law. What recourse would Wasco County have if UPRR didn't comply with the conditions?

For example under General Conditions:

Condition 13. Coal cars are required to be covered.
This is very important as the pollution from coal dust and debris adversely affects ground, air, and water quality.

Condition 15. UPRR shall stay within existing range of 20 to 30 cars per day as stated in the application materials.

In regards to the number of trains, 20-30 trains per day are already too many based on UPRR's poor safety record using accident statistics (there were 3.17 accidents per 1 million train miles in 2015 vs.an industry average of 2.59 accidents). The June 3rd accident in Mosier was a direct result of poorly maintained tracks. How many of the 20-30 trains per day would be oil trains?

Condition 17. UPRR shall provide regular training to Gorge fire departments included in the Mid-Columbia Five County Mutual Aid Agreements and requires UPRR to solicit feedback about local needs for combatting a railroad related fire incident and **make a good faith effort to assist** in meeting those needs.

What constitutes a good faith effort? Instead of just a good faith effort, why not require them to identify and meet local firefighting needs before even considering their proposal? What are those needs? Is there any way to prepare for an explosive oil train fire?
Meeting local firefighting needs in regards oil train fires is not even possible. If the normally prevailing winds had been blowing on June 3rd, the Mosier school building and everyone in it would have been "incinerated." There also could have been railroad cars in the river. In other locations along the tracks, containing an oil spill or fighting a fire would be next to impossible.

Condition 20. The development **shall not directly result** in an increased volume of rail traffic including number of trains, length of trains, or speed of trains.

UPRR could say that any increase was not a direct result of double tracking. Why not just prohibit both an increased volume of rail traffic and faster trains? Once again, who enforces this?
Why would UPRR even want to add the second track if it can't increase the number of trains per day? Is it just to prevent bottlenecks?

An additional concern is that access to sections of the preliminary staff report dated 2014 was denied due to redacted materials. This makes it difficult for citizens to participate in this process as we are denied access to necessary information, i.e., archeological, flora, and fauna.

In conclusion, UPRR's proposal would result in an unacceptable risk to the Columbia River Gorge which cannot be adequately addressed by any conditions for approval and should be denied. Furthermore, we support and concur with all comments submitted by Friends of the Columbia Gorge.

Sincerely,

Phil Swaim

PLASAR -15-01-0004 UNION PACIFIC DOUBLE TRACK Wasco County Oregon

1 message

Bill Brake <williamb98685@aol.com> Mon, Sep 5, 2016 at 10:13 PM
To: angieb@co.wasco.or.us

ANGIE BREWER
Planning Department
Wasco County, OR

June 3, 2016 Mosier Oregon rocked the world with a catastrophic crude oil unit train fire, explosion and spill into the Columbia River.

The day after the Spill on June 4, 2016, I wrote a letter to Mr. Fritz the CEO of Union Pacific Railroad asking for a copy of the Incident Report.

My background with Both grandfathers and a great Uncle in the rail industry for many years, and my personal 35 year career in the Energy Business as a Process Engineer, Safety Engineer and Manager should have been sufficient to obtain a copy of the report.

There was no response from Mr. Fritz. The Union pacific Has to Earn the Right to move freight in any county or city and earn the trust of the citizens and governing bodies by being a Good Neighbor in the Community and Strive for Operational Excellence.

Union Pacific Railroad has not demonstrated Good Neighbor and in fact are an aggressive neighbor.

The Crude Oil and Ethanol Industries both are in the Cross Hairs for Product Movement by Rail Cars. The Crude Oil Business is phasing out DOT-111 Rail Cars , but the Ethanol Industry and more specifically the Renewable Fuel Association indicates that DOT -111 Rail Cars have a useful life of 50 years and current operating fleet in only 9 years old. They firmly have made a statement opposing any and all upgrades to the DOT-111 Rail Cars.

The Global Partners Columbia Pacific Bio Refinery Site at Port Westward began Ethanol Operations this week and Union Pacific is the primary rail carrier.

The NuStar Vancouver Bio Fuel Conversion Project at 22,000 BPD or 32 Rail Cars Per Day of Ethanol is in the Clark County Washington Planning Department and the Ethanol product has 2 % Gasoline added to make the Ethanol not fit for human consumption. The Volume at 22,000 BPD is equal to 92 % of all the Ethanol Used in the entire States of Oregon and Washington in year 2014 according to the Energy Information Administration Web Site. Where is this product coming from and where is it going.

to Double Track Up Line supports more trains, more congestion and faster speeds all a dangerous combination for a repeat of Mosier Oregon June 3, 2016.

It is Recommended that the Permit for Union Pacific Double Track be Denied.

Thank You for allowing public comment on the proposed Union Pacific Double Track.

September 6, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.
- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.
- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any is discovered

commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.
- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.
- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

I do not want more oil and coal tracks built plus increase in number of trains.in Oregon and Washington. Liv

September 6, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.
- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.
- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any undiscovered

commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.
- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.
- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Wasco Co. Commission
C/O Ms Angie Brewer
Wasco Co. Planning Director

6 September 2016

RE: Proposed second rail line past Mosier, Oregon (through Wasco Co. and the Columbia Gorge National Scenic Area)

Dear Sirs and Madames,

My concern is more global that most of the comments you will receive. The entire world is in a climate-change crisis: not only warming but massive rain-storm floods in places, prolonged droughts in other places, rising sea levels on all coasts, tropical species including disease vectors moving poleward (think Zika), ocean acidification and the list goes on.

The undoubted cause is increasing carbon dioxide from fossil fuel burning. The first step in damping that cause is NO NEW FOSSIL FUEL INFRASTRUCTURE. The proposed second rail line proposed by Union Pacific is exactly that. Do not issue permits for the line. Do not issue permits for rock crushing near Memaloose State Park. Just say NO. I realize that the decisions will largely rest with the Federal Railway Administration. However, the voice of the Wasco County Commission will carry moral authority, a voice from the people "on the ground." Use that voice. Thank you.

Rick Rappaport <rick@rickrappaport.com> Tue, Sep 6, 2016 at 9:26 AM
To: angieb@co.wasco.or.us

Dear Angie Brewer, Planning Director

Please include this written testimony into the packets of testimony to be considered by the Planning Department on UP's new siding application.

"This is an application by Deutsche Reichsbahn national railway system under strict supervision of the Third Reich to expand an existing railroad siding on either side of Berlin, Germany for 4.02 miles of new second mainline track and realigned existing track, new equipment shelters, new drainage structures, a retaining wall, new lighting and signage, modify existing utilities, temporary landing zones for construction, construct permanent and temporary access roads and adjust a property line.

That's what the administrative description of the Holocaust Train could have looked like in 1938, and on its face it's just legalistic spew with no moral issues. Hey, it's just a railroad siding. But if you put blinders on and only see this narrowly constructed application without any regard for its obvious purposes, you are violating a much higher law than the one before you.

You are saying to your community, to all communities all along the Gorge, to native salmon in the Columbia, to this Earth that you do not really care what this railway line transports, that you are just doing your job, just following orders, and we all know the history of where that leads.

Oh, but this is unfair comparing Union Pacific's expansion of its oil train traffic to Nazi Germany's death trains. This is way out of line. It's Outrageous to make this kind of statement at a Wasco County Planning Department Hearing. Close your ears, this kinda stuff is not germane to our decision. Nazi Death Trains and the Union Pacific? Using the world's most heinous murderous acts of moral outrage at a Wasco County Planning Department hearing on a railroad siding? Get this guy out of the room. There are no deaths here and there are no acts against humanity? Really?

I urge you to find a way, find a way to deny this application, find a way in your listed criteria to deny Union Pacific. Show the world that the Wasco County Planning Department has drawn a line in the sand and at all costs will protect not only this community, but this River, these salmon and this Earth. Show us that the listed bureaucratic criteria you must consider are all subject to the common moral decency of right and wrong."

Rick Rappaport

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Kristina Turner

21 Linden St. Apt. A

Somersworth, NH 03878

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Steve Berman

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Christie Driscoll

Columbia Gorge oil train

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Thank you,

Lana Touchstone

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Judy Bensinger

No more oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Personally , I have a cousin whom I grew up with and who is precious to me who lives near Mosier and whose life and well-being I am deeply concerned about.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Marylynn Boris

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Patricia Rossi

AMY WINTER

6530 Kissena Blvd

Flushing, NY 11367

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should delay the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

John Gazurian

Oil Trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Kay Reinhardt - Anacortes, WA

Proposed new Union Pacific track

Pasco, WA 99301

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Caroline Bowdish

No more oil trains through Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Ian Shelley

No new rail track near Mosier

Seattle, WA 98126

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Arlene Roth

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Thank you,

Laura Craig

Opposition to Union Pacific Expansion!

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jere Grimm

No more oil trains through the Columbia Gorge!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

The Union Pacific Railroad's new track application to construct a new rail track near Mosier, OR resulting in increasing number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I am very concerned and ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings the land is either not needed for public use or the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated with less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

August 30, 2016

Dear Angie Brewer,

The Union Pacific Railroad's new track application to construct a new rail track near Mosier, OR resulting in increasing number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I am very concerned and ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings the land is either not needed for public use or the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated with less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

DK Bolen

August 30, 2016

Dear Angie Brewer,

The Union Pacific Railroad's new track application to construct a new rail track near Mosier, OR resulting in increasing number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I am very concerned and ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings the land is either not needed for public use or the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated with less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

DK Bolen

Dear Angie Brewer,

The Union Pacific Railroad's new track application to construct a new rail track near Mosier, OR resulting in increasing number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I am very concerned and ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination the proposed use will not burden fire facilities and available services,

nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings the land is either not needed for public use or the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated with less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jim Rankin

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Karen Graham

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Denis Andrews

Herbert Sayas

4618 Laurel St.

N. O., LA 70115

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Herbert Sayas

Oil Trains Through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

As an internationally recognizes Certified Systems Engineering Professional (CSEP) with over 50 years of experience on many engineering programs, I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

Any spill is one too many in this environmentally critical region!

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains

passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose

State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Darold Smith, CSEP, PE

No more oil trains through the Columbia gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Clyde Duane Zaloudek

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is

indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Heather Westphal

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new

track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sharon Fasnacht

Oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the

Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should delay the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jack Meyer

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

jessica locicero

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Dr. Thomas and Janice Boyce

Please keep dangerous oil and coal trains out of Washington & Oregon!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Andrew Frey

No More Oil Trains through the Gorge.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

William Mitchell

Oil trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jillian Sang

Stop the oil trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Gregory Monahan

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Dave Searles

No Oil trains through Columbia Gorge

PO Box 2553

Thompson Falls, MT 59873

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. I am a former Oregon resident.

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

C L Burger

No more oil trains through the Columbia Gorge

Madison, WI 53705

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would

adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely

affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Eric Robson

Please deny Union Pacific's expansion plans through the Columbia Gorge!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

We need more renewable energy, not more trains carrying oil.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Betty Ramsey

Application for New Rail Track near Mosier Oregon should be denied

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

David Doering

Oil trains throught the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the

Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Andreas Enderlein

NO more oil trains! They threaten our towns and cities, waterways, clean air

In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

David Stetler

No Oil Trains through the Columbia River Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby

increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union

Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Bill Marvin

No More Oil Trains Through Columbia River Gorge

1111 115th St Ct NW

Gig Harbor, WA 98332

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Anke wildman

Fernley, NV 89408-2377

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Alek Hyra

OIL TRAINS

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Berklee Robins, MD

No to new railroad near Mosier, OR

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Timothy Beitel

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Saul Adelman

No more oil trains through the Columbia Gorge.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Nancy Meute

No more oil trains through the Columbia Gorge.

Bellevue, WA 98006

September 1, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This means economic harm as well. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would blow onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This non-permitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of Oregonians' park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Matthew Emmer

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Thomas Smith

Stand Up to Oil

September 1, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Cooper Kairis

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia

River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia

River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Melissa Godsey

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean

Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Liisa Kellems

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe; Approval of this

project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of

how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Ban oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

A.C. McGarry

oil trains Gorge

eugene, OR 97405

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

kathy ging

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Nathan Hecht

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Nathan Hecht

Please do not add oil tracks next to the river!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Helen Glidden

Scottsdale, AZ 85266

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Dear Angie Brewer,

Along with the local residents who will be directly affected and have the most to lose, I am also very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR.

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia

River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia

River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you.

Very truly yours,

A.J. Averett

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

James Cummings

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge and cities like Spokane, Washington where the trains go by the our hospitals and schools.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Judy Avery

No more oil trains through the Columbia Gorge

New York, NY 10001-2332

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Katie Garton

Rail Line Capacity Expansion

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

mary neptune

seattle, WA 98117

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

sincerley

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains

passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose

State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Too many disasters have happened along these shipping lines. Don't increase the chances for more.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Kathryn A. Burns

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

jennifer michelle prevost

August 30, 2016

Dear Angie Brewer,

STOP ALL DANGEROUS SHIPMENTS !!!!!

am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely, Hamilton

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new

track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

GREG MUELLER

Largo, FL 33771

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the

Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil

tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that

any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Patsy Cushing

North Las Vegas, NV 89084

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated

key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

ingeborg glier

No More Union Pacific Oil Trains

Dear Angie Brewer,

I'm surprised that you're asking for a new rail track near Mosier, especially so soon after the last accident. We feel relatively lucky that the last time wasn't even more of a disaster.

It seems that oil spills and explosions are not unusual events. People in many parts of North America have suffered serious damages to the environment, and large numbers of deaths to workers and people who happened to be in the wrong place at the wrong time.

The new track and resulting increase in number, length and speed of trains pose unacceptable risks to Columbia River and its population. We also face the dangers of plans to build new coal and crude oil terminals throughout the Northwest.

Please turn down these proposals. Bakken oil is particularly explosive and almost impossible to clean up. The train cars and tracks are insufficiently protected against accidents. The record of safety inspections shows that these big industries cannot be trusted. In fact, the records are a disgrace.

We can't afford to pay for fire services these projects would require even if we could trust the industries to take proper precautions.

In addition, we object to the decreased air and water quality, which affects the health of millions of people in the area.We don't want our beautiful scenery to be ruined. We don't want to have our wetlands filled and we don't want our animals and plants to be harmed. We don't want to breathe coal dust. We don't want the negative effects on our Native cultural heritage.

Thank you for your attention.

Sincerely,

Sincerely,

Mary Nye

Oil Trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely

Cecile Lemay

Stop Oil Trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to

cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be

adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sylvan Grey

Oil trains through Columbia Gorge

Dummerston, VT 05301

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

2303 6th St

Everett, WA 98201-1114

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Julianne Martinson

Deny Union Pacific's application to extend their raillines near Mosier

1 message(s)

Date: Tue Aug 30 2016 15:49:02 GMT-0600 (MDT)
From: Julie Martinson
To: Angie Brewer

ID: 156dd6d4e81e14aa

Dear Ms. Brewer:

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:
Crude oil-by-rail threats:
- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire

suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.
- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.
- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.
- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.
- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.
- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.
- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.
- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.
- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.
- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.
- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.
- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.
- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely

affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe. Approval of this

project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of

how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Mary Ferraro

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans

to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

John and AJ Jittipsopa-Zinner

Oil trains in the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.
