- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

David Brodt

Stop oil trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Larry & Elaine Green

Columbia Gorge Oil Trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

J. Hays

Oil trains in Oregan

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Elizabeth Tuminski

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Mitch Parkinen

No More Oil Trains Through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Lonnie Albrecht

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Larry Forrest

Olympia, WA 98501

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

I grew up in Vancouver WA and have spent many beautiful days in the Columbia Gorge. We cannot afford to take any chances in ruining the beauty, the habitat, the history or the water.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Karen Verrill

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should delay the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

janet petermann

Oil Trains

Reno, NV 89509

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jan Fortini

New Rail Track Application by Union Pacific

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Lance Polya

Prohibit Oil Trains in the Columbia Gorge

Drayden, MD 20630

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

PO-2-25209

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Ellen Halbert

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sandra Perkins

Oil trains

New York, NY 10024

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

John Markowitz, M.D.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Robert Linzmeier

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Jan Phillips

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should delay the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

sidney sisk

Regarding UPRR Oil and Coal Transport through the Columbia Gorge

Dear Angie Brewer,

Of grave concern is Union Pacific Railroad's application to construct a new rail track near Mosier, OR.The new track and the resulting increase in number, length and speed of trains pose dread risks to the National Scenic Area, the Columbia River, public health, and the environment. This is undeniably true in light of the proposals to build new coal and crude oil terminals throughout the Northwest. Such terminals would result in a remarkable increase in coal train traffic, and trains carrying dangerous and volatile oil through the Gorge.

We ask that you deny Union Pacific Railroad's application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the rail transport of oil, including explosive Bakken oil, through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby astronomically increasing the risk of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier derailment and fire, we ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding Union Pacific at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific. UPRR continues to demonstrate that it is an irresponsible company.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of the trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility in violation of at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause

adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances. It would have extreme scenic and recreation impacts, a reason why it is not permitted.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affects wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in clear violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge significantly underestimate the increase. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time that the crossing gates are down. This hinders traffic flow, hampers first responders, inconveniences drivers, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That concealed information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by a professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that will not adversely impact resources and health within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

The project area has a very high probability of containing Native American cultural resource sites that would be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done with tribal councils and official advocates for the indigenous populations.

Thank you this opportunity to comment. I look forward to your response to this matter.

Sincerely,

With concern,

Dr. Juana Celia Djelal

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to

cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be

adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia

River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture

threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dave Ogilvie

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier

Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would

adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely

affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause

adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That

information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia

River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia

River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Dennis O'Brien

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area,

the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe. Approval of this

project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of

how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jason Kull

Save our Gorge, the people living there, visiting there and all non-humans who inhabit it! Protect life on this planet and start here!

Warren, OR 97053

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that

any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Too big and Too Dangerous!

Janet Monical

No oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated

key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Michelle Benes

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

P.O. Box 811

Eugene, OR 97402

August 30, 2016

Dear Angie Brewer,

Even though I'm not a constituent, oil trains in the Columbia Gorge impact us farther south in Eugene too -- we are ALL connected, and the environment is global. We absolutely must start exploring and supporting cleaner forms of energy, if we have any expectation that our culture will survive.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude-oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you for this opportunity to comment, and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Laura M. Ohanian

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

Even though I'm not a constituent, oil trains in the Columbia Gorge impact us farther south in Eugene too -- we are ALL connected, and the environment is global. We absolutely must start exploring and supporting cleaner forms of energy, if we have any expectation that our culture will survive.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude-oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you for this opportunity to comment, and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Laura M. Ohanian

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that

any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Bryan Gilroy

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated

key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is

prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Are

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Peter Kerr

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new

coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution

uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Sandra Joos

Vancouver, WA 98662

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

James Keeley

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts of the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Howard Brady

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Adrienne Ross

Dangerous fuel trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Cheryl Ivey

Please, No More Oil Trains in the Columbia Gorge. It is Too Dangerous !!!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely, I miss living in Oregon

Margaret Meyer

No more oil trains through the Columbia Gorge

PO BOX 26

RANCHO MIRAGE, CA 92270

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Mame Boyd

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia

River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,Sincerely

Evelyn Popejoy

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture

threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Calli Madrone

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier

Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length & speed of trains pose significant risks to the Nat'l Scenic Area, the Columbia River, public health, & the environment, particularly in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

• The project would facilitate oil transport, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. UP routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars; oil trains are inherently unsafe. Approval of this project would increase the number, length, and speed of trains passing through the CRG, increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, please deny the permit on these grounds.

• The FRA released a report in June finding that UP was at fault for the oil train derailment and fire in Mosier, OR as they failed to follow safety and rail inspection requirements. According to the FRA, UP has perennially poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44%; for UP it is 56%, showing a pattern of inadequate UP maintenance.

Impacts to the Columbia River Gorge National Scenic Area:

• The project is inconsistent with the Nat'l Scenic Area Act purposes, passing trough some of the most highly protected lands in the Nat'l Scenic Area, could increase the number of trains passing through the Gorge, and the length and speed of these trains, which would adversely affect scenic, natural, cultural & recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: Construction of double-tracking & related development would cause adverse impacts to scenic resources, in violating County ordinance on protected views from key viewing areas.

- The proposed 6-acre rock crushing area next to Memaloose St Pk is not allowed under County ord's, having extreme scenic & recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affects wetland habitat, is not in the public's interest, and is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is in habitat for many protected animal & plant species. More trains and higher speed travel would mean more collisions with wildlife trying to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- With coal transported in open coal cars, it would blow onto scenic area lands and into the Columbia River. As seen on the Burlngtn North track, north side of the Columbia, every coal train pollutes the CRG with coal dust. This unpermitted pollutant discharge violates federal Clean Water Act.of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge to be gross underestimates. UP had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, leading to trains traveling at higher speeds through the recreation area and adversely affecting recreation resources and endanger public safety. OPRD must ensure any land sale wouldn't conflict with the National Scenic Area Recreation Development Plan, and its plans to expand Memaloose Cmpgrd and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment. I look forward to your reply.

Sincerely,

Sincerely,

Mary Rexford

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a

professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

The science is clear. To avoid catastrophic global warming, these fossil fuels must remain in the ground!

James M. Wallrabenstein

The danger of oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Adair DeLamater

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia

River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean

Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely

Edward Day

1602 speedway rd.

Verona, WI 53593

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe. Approval of this

project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of

how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Rose Wood

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for

the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Patricia Fiedler

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

My wife and I have visited this gorgeous region and do not want to see it despoiled. Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans

to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Paige McGlaughlin

Seattle, WA 98115

September 2, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

marie anderson

Railroad Risk

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for

conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase

train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Vicki Huddleston

Coal & Oil Trains

September 2, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dena & Gloria Dahlke

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

September 2, 2016

Dear Angie Brewer,

As a physician and resident in the Columbia Gorge, I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR where we had a catastrophe this summer determined to be due to Union Pacific's failure to maintain its current tracks.

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is

indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Dr. Rick Allen

Revise Coal Export DEIS to Protect Health, Safety, & Environment

Ormond beach, FL 32176

September 2, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new

track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Morgan Belfer

No more oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the

Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

David Pickner

No more oil trains through the Columbia Gorge

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that

any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Julia Hurd

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated

key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Tom Porpiglia

Oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Joan Yater

No OIL TRAINS!!

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available

services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. August 30, 2016

Dear Angie Brewer,

I'm appalled by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest that would result in a significant increase in traffic of coal trains and dangerous and volatile oil trains through the Gorge.

You must deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s, and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015.

Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, You must deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR, because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area, and could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains, adversely affecting scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock-crushing area adjacent to Memaloose State Park is not allowed under County ordinances, and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands would adversely affect wetland habitat, and is not in the public interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds would increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier by creating a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project must be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project must be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks must deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use, or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives must be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native

American cultural resource sites that would be adversely affected in violation of County ordinances. These resources must be protected and be subject to consultation.

I look forward to your reply on this matter.

Sincerely,

Sincerely,

Shireen Parsons

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that

any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Nancy White

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated

key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Susan Hebert

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is

prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby

increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union

Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Jody Gibson

No More Poisonous Fuels Trains!!!

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I wish to express my strongest oppostion to the Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Clyde Alan Locklear

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Bob Brucker

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Emily Trinkaus

NO TO OIL TRAINS

August 30, 2016

Dear Angie Brewer,

A rail line passes in back of my house. I used to love the sound of the trains. It was relaxing. Since learning of the oil trains and the poor maintenance record of the railroads - both the tracks and the oil cars - it scares me to death every time I hear one.

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River

Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Elizabeth Hauser

Denial of the Proposed new rail track near Mosier, OR

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Robert

Robert Liedike

Protect the Columbia Gorge from dangerous oil trains

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia

River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Robert Fischoff

No more oil trains

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Perry Gx

Rail Oil Shipment

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the

community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new

track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Maureen Lang

No more oil trains through the Columbia Gorge

Federal Way, WA 98023

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the

Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

For the earth, air and water,

Lucia Faithfull

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. This is a horrible, horrible idea! Please protect the Gorge.

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,Christopher J Kralik

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Gary Lite

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I ask you to deny the Union Pacific Railroad's application to construct a new rail track near Mosier, OR. Please don't protect money interests, but people and the planet.We must move to sustainable clean energy as fast as possible. We do not need to help oil companies to sustain their business. That is a wrong goal at the expense of people's lives, health and the planet.

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Naomi Aldortt

---

the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

No more gas trains through Scenic areas

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The

industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County

ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of

plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Bette Letscher

No more oil trains through the Columbia Gorge

Joanne Fitzwilson

700 Washington Street, Suite 823

Vancouver, WA 98660

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements.

According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This

inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

My husband and I are very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

We ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is

degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale

of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

PLEASE TAKE THE RIGHT, FAIR, JUST, HUMANE AND HEALTHY ACTION AND NO EXPANDED OIL TRIN TRAVEL THROUGH THE COLLUMBIA GORGE.

Sincerely,

Mary Ann and Frank Graffagnino

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Theodore Bahn

Union Pacific at Mosier

Dear Angie Brewer,

Your Planning Commission decision for Union Pacific Railroad's application to construct a new rail track near Mosier, OR is an important one. The incident earlier this summer is its own best evidence.

Please proceed thoughtfully. As a resident along the banks of the Columbia River system/I ask you to look at the short-term and long-term issues. I ask you to deny this application.

Thank you.

Sincerely,

Susan Crampton

Bellingham, WA 98226

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely, Your action is important

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Cort Brumfield

No more oil trains through the Columbia Gorge

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic

would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that

the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Karen Wood

14910 NE 46th St

Vancouver, WA 98682

August 30, 2016

Dear Angie Brewer,

I live in Vancouver, WA, and I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR, because it is likely to increase rail traffic through Vancouver to points north.

The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean

Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Karen Wood

NO MORE OIL TRAINS

Kansas City, MO 64110

August 30, 2016

Dear Angie Brewer,

I am very concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this

project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of

how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

August 30, 2016

Dear Angie Brewer,

I am VERY concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans

to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Dear Angie Brewer,

I am VERY concerned by Union Pacific Railroad's application to construct a new rail track near Mosier, OR. The new track and resulting increase in number, length and speed of trains pose significant risks to the National Scenic Area, the Columbia River, public health, and the environment. This is particularly true in light of the proposals to build new coal and crude oil terminals throughout the Northwest which would result in a significant increase in traffic of coal trains, and dangerous and volatile oil trains through the Gorge.

I ask you to deny this application for the following reasons:

Crude oil-by-rail threats:

- The project would facilitate the transport of oil, including explosive Bakken oil, by rail through the Columbia River Gorge National Scenic Area. Union Pacific routinely operates oil trains at speeds far in excess of the puncture threshold of oil tank cars, including DOT 111s, CPC 1232s and even the new rail cars required by the USDOT's oil tank car safety rule and the FAST Act passed by Congress in 2015. Oil trains are inherently unsafe: Approval of this project would increase the number, length, and speed of trains passing through the Columbia River Gorge, thereby increasing the risks of catastrophic derailments involving oil spills, explosions and fires. Two of the criteria for conditional use review require a determination that the proposed use will not burden fire facilities and available services, nor significantly increase fire hazards, fire suppression costs, or risks to fire suppression personnel. In light of the Mosier incident, I ask you to deny the permit on these grounds.

- The Federal Railroad Administration (FRA) released a report in June finding that Union Pacific was at fault for the oil train derailment and fire in Mosier, OR because they failed to follow safety and rail inspection requirements. According to the FRA, Union Pacific perennially has poor accident statistics when compared with its peers. The industry average of accidents caused by tracks, signals, or equipment is 44% and it is 56% for Union Pacific. This demonstrates the pattern of inadequate maintenance done by Union Pacific.

Impacts to the Columbia River Gorge National Scenic Area:

- The project is inconsistent with the purposes of the National Scenic Area Act: The project would pass through some of the most highly protected lands in the National Scenic Area. The project could increase the number of trains passing through the Gorge, the length of trains passing through the Gorge and the speed of trains. This would adversely affect scenic, natural, cultural and recreation resources and endanger local communities.

- The project would harm air quality: Air quality within the Columbia River Gorge National Scenic Area is degraded by emissions from both mobile and stationary sources. Diesel emissions from an increase in train traffic would adversely affect air quality and visibility. This violates at least one of the criteria for conditional use review.

- Adverse impacts to scenic resources: The construction of double-tracking and related development would cause adverse impacts to scenic resources in violation of County ordinance, particularly the protected views from designated key viewing areas.

- The proposed 6-acre rock crushing area adjacent to Memaloose State Park is not allowed under County ordinances and would have extreme scenic and recreation impacts.

- Harm to wetlands: The project would require large amounts of fill in multiple wetlands adjacent to the Columbia River. Filling these wetlands adversely affect wetland habitat and is not in the public's interest. Filling wetlands is prohibited in the Special Management Areas of the National Scenic Area.

- Threats to sensitive plant and animal species: The project is located in habitat for many protected species of plants and animals. More trains traveling at higher speeds would result in more collisions with wildlife attempting to cross the tracks.

- Bridges: New bridge construction would provide a potential location of new point source pollution if any uncovered commodities are transported on the new track. Higher speeds will increase likelihood of wind-blown pollution into waterways in violation of the Clean Water Act.

- Coal transported in open coal cars would result in coal blowing onto scenic area lands and into the Columbia River. As evident on the Burlington Northern track on the north side of the Columbia, every coal train pollutes the Columbia River Gorge with coal dust. This unpermitted discharge of a pollutant is a violation of the federal Clean Water Act.

Impacts of more trains:

- A recent report from Whiteside & Associates and Fauth & Associates found that Union Pacific's statements of how much this rail expansion would increase train traffic through the Gorge were significantly underestimated. Union Pacific had claimed the expansion could increase traffic by 5 to 7 trains per day, while the report finds it could increase train traffic by 10 times this amount, to up to 75 to 100 trains per day.

- The project would harm the community of Mosier: The project would create a double-track through the Mosier Urban Area, negatively impacting the local community and environment.

- The proposal would obstruct traffic in The Dalles. More trains mean more time the crossing gates are down. This inconveniences drivers, hampers first responders, and violates the conditional use review criteria.

More review needed:

- The project should be reviewed as new development: Considering the size and potential impacts on the community and surrounding environment, this project should be considered a new facility rather than an expansion.

- Harm to parks and recreation resources: The project would construct an additional rail line through Memaloose State Park, which would lead to trains traveling at higher speeds through the recreation area. This would adversely affect recreation resources and endanger public safety. Oregon Parks and Recreation Department must ensure that any sale of land would not conflict with the National Scenic Area Recreation Development Plan, which includes plans to expand Memaloose Campground and improve access to the Columbia River. Oregon Parks should deny the sale of our park land for rail expansion: OPRD may not sell any land to Union Pacific without first adopting findings that the land is either not needed for public use or that the sale would further the public interest.

- UPRR excluded details on development within the Mosier Urban Area from the NSA application. That information must be considered as part of NSA cumulative impacts analysis.

- The County ordinance requires field surveys by professional wildlife biologist hired by the applicant and a professional botanist hired by the applicant.

- Project necessity: The project should be evaluated to see if it is necessary to provide a public service. If it is indeed necessary, alternatives should be evaluated that have less adverse impacts to resources within the Columbia River Gorge National Scenic Area, such as siting the project outside of the National Scenic Area.

Finally, the project area has a very high probability of containing Native American cultural resource sites that could be adversely affected in violation of County ordinance. These resources must be protected and proper consultation done.

Thank you this opportunity to comment and I look forward to your reply on this matter.

Sincerely,

Sincerely,

Maurine Canarsky
